

STATEMENT OF NEED
NOAA Wallops Command & Data Acquisition Station
X Band LNA

1. Introduction/Background

The U.S. Department of Commerce (DOC), National Oceanic and Atmospheric Administration (NOAA), Office of Satellite and Product Operations (OSPO) is an organizational component of the National Environmental Satellite, Data and Information Service (NESDIS). The OSPO has operational responsibility for the Satellite Operations Control Center (SOCC) at Suitland, MD and the Command and Data Acquisition Stations (CDAS) at Wallops, VA (WCDAS) and Fairbanks, AK to command and control the satellites, to track the satellites, and to acquire their data. The OSPO also manages and directs the operation of the central ground facilities which ingest, process, and distribute environmental satellite data and derived products to domestic and foreign users.

2. Scope of Work

The purpose of this acquisition is to procure five (5) X Band Low Noise Amplifiers (X Band LNA) for the Low Earth Orbit (LEO) 14.2 M antenna system. The X Band LNA is an integral part of the 14.2M antenna downlink system. The X Band LNA receives low level incoming satellite signals and conditions the signal to a usable level so the downlink receiving system can manipulate the signal. These LNAs enable the LEO 14.2 M antenna system to provide continuous, uninterruptible critical data to our global customers. The WCDAS must have spare devices available in order to keep the antennas in service and avoid interruption in the receipt of the incoming critical data. Recently completed testing identified the three LNAs currently in service are underperforming and must be replaced. Two of the five units to be procured will be kept on-site as replenishment spares to ensure there is no loss of data collection due to the ground system's inability to track satellite.

3. Product Specifications

See X Band LNA Product Specification Sheet

4. Security Requirement

Contractor access to facilities or equipment is not required. Following on-site delivery of the equipment by a third-party shipping service, authorized personnel will install and configure the equipment in accordance with the Geostationary Operational Environmental Satellite Series-R (GOES R) configuration management procedures.

5. Requested Delivery Date

Delivery Date: 28 weeks after receipt of award

6. Delivery Address

35663 Chincoteague Road
Wallops Island, Virginia 23337

7. Shipping Instructions

The Contractor shall provide written notification to the Contracting Officer Representative (COR) of the shipment of the required X Band LNAs and include tracking number(s).

8. Contracting Officer Representative (COR)

To be provided at the time of award
