

NOTICE OF INTENT TO SOLE SOURCE

Contracting Opportunities Announcement Type: Special Notice

Announcement Number: AMDTCNOI2501579

Subject: Repair of Existing Teledyne Camera (Spectrum Measurement System)

Introduction

This is a notice of intent, not a request for a quotation. A solicitation document will not be issued, and quotations will not be requested.

Purpose

The National Institute of Standards and Technology (NIST) intends to negotiate a firm-fixed priced purchase order on a sole source basis with Teledyne Princeton Instruments, a business unit of Teledyne Digital Imaging US, Inc., located at 3660 Quakerbridge Road, Trenton, New Jersey, 08619, USA. The purchase order will specifically procure contractor services in the repair of an existing Teledyne camera. NIST has a single-photon-level spectrum measurement system developed by Teledyne, which plays a critical role in NIST research on quantum photonic devices, and the camera is an integral component of the Teledyne spectrum measurement system. Delivery shall be FOB Destination and made within eight (8) weeks after receipt of order (ARO) and shall include a one (1) year extended warranty.

Authority

This acquisition is being conducted under the authority of FAR Subpart 13.106(b)(1) allowing the Contracting Officer (CO) to solicit from one source. The North American Industry Classification System (NAICS) code for this acquisition is 334516 – Analytical Laboratory Instrument Manufacturing with the small business size standard of 1,000 employees.

Description

See attached Statement of Work (SOW) document.

Sole Source Determination

The sole source determination is based on the following:

NIST currently owns a single-photon-level spectrum measurement system developed by Teledyne, which plays a critical role in the laboratory research on quantum photonic devices. This system is specifically designed to measure and characterize the photon spectra of quantum emitters, including single-photon and entangled-photon sources. Accurate spectral characterization at the single-photon level is essential for the research on such devices. A key component of the system is the PyLoN-IR InGaAs cooled camera, which is responsible for detecting low-intensity infrared photons with high sensitivity and low noise. After a thorough inspection by Teledyne, it was confirmed that the camera hardware had failed and requires repair. This repair is critical to NIST's ongoing quantum device characterization efforts to resume critical measurements and continue progress on the quantum research projects.

Information for Interested Parties

Interested parties that believe they could satisfy the requirements listed above for NIST may

clearly and unambiguously identify their capability to do so in writing by or before the response date for this notice. This notice of intent is not a solicitation and questions will not be entertained.

All responses to this notice of intent must be submitted via email to jennifer.lohmeier@nist.gov so that they are received no later than **May 14, 2025 at 10:00** AM, Eastern Time.

Each response shall include the following Business Information:

- a. Contractor Name, Address,
- b. Point of Contact Name, Phone Number, and Email address
- c. Contractor (SAM) Universal Entity Identification (UEI)
- d. Contractor Business Classification (i.e., small business, 8(a), woman owned, HUBZone, veteran owned, etc.) as validated in System for Award Management (SAM). All offerors must have an active registration in www.SAM.gov.
- e. Capability Statement
