

Statement of Work

The USGS requires an annual subscription to Liquid Robotics' Wave Glider Management System (WGMS). The WGMS is provided as a Software-as-a-Service (SaaS) web application for remote Wave Glider mission management that includes piloting and data management tools.

From the WGMS User Interface you can:

- Access administrative tools
- Access mission preparation tools
- Access piloting tools
- Issue commands to the vehicle
- Issue commands to payloads
- Display and Store vehicle data
- Display and Store system data
- Display and Store payload data

The WGMS is essential to the operation of the USGS Wave Glider for our Seafloor Geodesy program.
