

FEDERAL BUREAU OF INVESTIGATION

Ion Chromatography System

Requisition Number: SHOP-PR-25-002216

Division(s): Laboratory Division

Justification for Other than Full and Open Competition

Nature and/or description of the action being approved

The Federal Bureau of Investigation's LABORATORY DIVISION requires the following product(s)/service(s):

- Forensic Appliance

In support of operational case work.

Contract Type

New contract/agreement; Firm Fixed Price

Statutory authority permitting restricted (other than full and open) competition

The Federal Bureau of Investigation's selected statutory authority which permits restricted (other than full and open) competition for this requirement is listed below.

41 U.S.C. 3304(a)(1), FAR 6.302-1 — Only One Responsible Source (Brand Name Specification)

Unique qualifications of the proposed contractor or the nature of the action requiring the use of the authority

The Federal Bureau of Investigation's qualification of the selected statutory authority which permits restricted (other than full and open) competition for this requirement is stated below.

41 U.S.C. 3304(a)(1), FAR 6.302-1 — Only One Responsible Source (Brand Name Specification)

Unique qualification(s) application:

There is a reasonable basis to conclude that the agency's minimum needs can only be satisfied by unique supplies or services available from only one source or only one supplier with unique capabilities.

Unique qualification(s) details:

The Explosives Unit requires Thermo Electron North America LLC Inc products (branded as Thermo Scientific, ThermoFisher Scientific, and/or Thermo Scientific Dionex), components, and equipment to exclusion of other brands. This system is a replacement to an out of service instrument that was previously installed and utilized by the EU in support of law enforcement mission operations, investigations, and core functions. The specific replacement instrumentation and software are already written into EU technical procedures. The examiners and chemists running the instrumentation and performing data analysis are also already trained and qualified on its operation. Procuring a similar system from another vendor would put undue burden on multiple units within the LD to rewrite procedures, revalidate methods, and retrain personnel on new instrumentation and software. Furthermore, existing accessories from similar Thermo Scientific Dionex IC systems already present at the FBI Laboratory are interchangeable and can be used on this system. Thermo Electron North America LLC is uniquely qualified to

provide these services to the FBI LD Explosives Chemistry discipline in the EU.

Thermo Electron North America LLC is the manufacturer of the Thermo Scientific Dionex Inuvion IC system and has provided the most competitive and cost-effective instrumentation. As the manufacturer, the FBI will be dealing directly with Unity Lab Services (a subsidiary of Thermo Electron North America LLC) for any repairs, updates, preventative maintenance, or warranty issues. All accompanying and replacement products provided by Thermo Electron North America LLC through Unity Lab Services will be also compatible with the Thermo Scientific Dionex IC systems and consistent with the warranty and function of the instruments. Thermo Electron North America LLC has a demonstrated timely response and value, based on prior experience with other Thermo Scientific Dionex instruments. Additionally, they provide replacement parts and competent service through Unity Lab Services.

Description of efforts made to ensure that offers are solicited from as many potential sources as is practicable

The Federal Bureau of Investigation's efforts made to solicit offers among as many sources as practicable is described below.

Sources Sought Notice via SAM.gov (or otherwise)

Market research was conducted through internet searches, research of scientific literature and brochures, and via conferences attended by members of the EU. Explosives Unit personnel regularly study current scientific literature and attend scientific conferences regarding new technologies available to keep abreast of which vendors offer equivalent instrumentation and services needed. The resulting determination is that there is only one product that currently meets all the criteria outlined in this document, and that is the Thermo Scientific Dionex Inuvion IC system.

Anticipated dollar value of the proposed acquisition and determination by the contracting officer that the anticipated cost to the government will be fair and reasonable

The Federal Bureau of Investigation's methodology which supports the determination of fair and reasonable cost to the Government is provided below.

Market Research (including an Independent Government Cost Estimate)

IGCE has been attached

Description of the market research conducted and the results

The Federal Bureau of Investigation's description of the market research technique(s) it employed to determine the necessity of restricted (other than full and open) competition is provided below.

Contacting knowledgeable individuals in Government and industry regarding market capabilities to meet requirements.

Scientists reach out to other Government labs to discuss equipment and instruments.

Reviewing the results of recent market research undertaken to meet similar or identical requirements.

Scientists are always reviewing technical journals and seeing what is on the market for cutting edge technology.

Reviewing catalogs and other generally available product literature published by manufacturers, distributors, and dealers or available on-line.

Scientists are always reviewing technical journals and seeing what is on the market for cutting edge technology.

The Federal Bureau of Investigation's description of additional facts which support the use of restricted (other than full and open) competition is provided below.

The Federal Bureau of Investigation's listing of interested sources is provided below.

This requirement was not publicly synopsized. As such, no other sources have expressed an oral or written interest.

The Federal Bureau of Investigation's planned and/or executed actions to remove or overcome competitive barriers for subsequent acquisitions are described below.

Other

The actions of the LD Explosives Chemistry discipline in the EU to identify potential sources possessing the ability to satisfy this and similar requirements are ongoing. Over time, additional sources may become available and identifiable through market surveys, scientific journal articles, or other means.

The Federal Bureau of Investigation's description of the requirement which meets its needs is listed below.

Products

Base Period: 2025-06-01 to 2026-04-16

Services

Base Period: 2025-06-01 to 2026-04-16

Other Direct Costs (ODCs)

This contract will allow for the purchase of services or goods classified as other direct costs (ODC) as identified herein. Any ODCs not documented in advance of contract award will require written approval by the FBI contracting officer (CO) prior to the purchase. Requests for approval must specifically identify the services or goods to be procured and the estimated price of each. Justification is required for all ODCs that demonstrate that the goods or services to be purchased are in direct support of the contract. Invoices submitted for payment that include ODCs must specifically identify the services or goods purchased and break out in detail the costs associated with the ODCs. Invoices containing ODCs not listed in the contract or identified and approved by the CO in advance of billing will be treated as improper invoices and will not be paid. Similarly, invoices that include ODCs listed in the contract but fail to specifically identify them and elucidate the costs in detail, will be treated as improper and will not be paid.

Base Period: 2025-06-01 to 2026-04-16
