

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
NASA SHARED SERVICES CENTER

RECOMMENDATION AND DETERMINATION TO SOLICIT FROM ONE SOURCE
OR BRAND NAME

PICK ONE

Sole Source:

☒ I recommend that NASA, NASA Shared Services Center negotiate with Advanced Scientific Concepts only for Modifying 3-Dimensional Imaging Flash Lidar Camera. The total estimated cost of this effort is [REDACTED] and the estimated period of performance is 05/23/2025.

OR

Brand Name Justification:

☐ I recommend that NASA, NASA Shared Services Center negotiate with only with vendors who can provide the subject band name from Manufacture Name for Enter Supply or Service to be procured. The total estimated cost of this effort is Enter Dollar amount and the estimated period of performance or lead-time for delivery is Date.

This recommendation is for the acquisition of supplies or services determined to be reasonably available from only one source/only one manufacture. Competition is impractical for the following reasons (please answer the questions below):

1. **What are the reasons for soliciting only the suggested source/suggested brand name?** Please provide the unique characteristics of the items or services along with the supporting rationale and the market research performed to substantiate your reason for the suggested source/brand name.

This contract is for repairing a 3-Dimensional Imaging Flash Lidar Camera procured in 2021 under PO number 80NSSC21P1981. This 3-D Camera is unique to Advanced Scientific Concepts and no other vendor manufactures it. The 3-D Camera, developed by Advanced Scientific Concepts several years ago, is the heart of the Imaging Flash Lidar developed at NASA LaRC.

2. **What is the impact to the government if another vendor/brand is used?** Include any dollar, schedule, or compatibility impacts if possible.

We are building an Imaging Flash Lidar prototype system for a series of drone, balloon, and aircraft flight tests to demonstrate the viability of this technology for future landing missions requiring onboard hazard detection, terrain relative navigation, and altimetry capabilities. In order to demonstrate the merits of this lidar instrument over its intended operational range of 70 km, this 3-D Camera must be modified and upgraded.
