

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
NASA SHARED SERVICES CENTER

RECOMMENDATION AND DETERMINATION TO SOLICIT FROM ONE SOURCE
OR BRAND NAME

PICK ONE

Sole Source:

☒ I recommend that NASA, NASA Shared Services Center negotiate with FM:Systems Group, LLC only for FMS Employee On-Prem to SaaS. The total estimated cost of this effort is [REDACTED] and the estimated period of performance or lead-time for delivery is 6/2/2025.

OR

Brand Name Justification:

☐ I recommend that NASA, NASA Shared Services Center negotiate only with vendors who can provide the subject brand name from Manufacture Name for Product being purchased. The total estimated cost of this effort is \$Dollar Amount and the estimated period of performance or lead-time for delivery is Date.

This recommendation is for the acquisition of supplies or services determined to be reasonably available from only one source/only one manufacture. Competition is impractical for the following reasons (please answer the questions below):

1. **What are the reasons for soliciting only the suggested source/suggested brand name?** Please provide the unique characteristics of the items or services along with the supporting rationale and the market research performed to substantiate your reason for the suggested source/brand name.

Langley Research Center (LaRC) is currently benefitting from a successful contract with FM Systems that provides both hardware and software solutions for managing the scheduling of 24 onsite conference rooms. Employees at LaRC utilize tablet panels positioned outside each conference room to check real-time usage and schedule upcoming meetings, as well as to interface and reserve the spaces through the devices. This arrangement is based on an on-premises solution, which is now in the process of transitioning to a cloud-based platform. NASA requires real-time, privacy-focused data on workspace utilization to optimize space and generate usage reports. LaRC has already invested in hardware and cabling infrastructure that is compatible with FM Systems. Transitioning to an alternative solution would incur significant costs related to hardware replacements, data migration, and retraining, thereby introducing considerable risks to both the schedule and the budget. FM Systems was selected as the preferred provider for LaRC due to its proven effectiveness within NASA and its unique capabilities. Since 2019, FM Systems has operated as an on-premises solution at LaRC, successfully managing complex facilities such as the Integrated Engineering Services Building (IESB), which accommodates approximately 2,200 personnel. The transition to the SaaS version will provide enhanced scalability and additional features. LaRC has already installed PoE CAT V/VI cabling to support the panel setup for the 24 conference rooms. Market research, which included an analysis of LaRC's successful implementation, an evaluation of government-wide adoption, and a review of the product's compatibility with NASA's efficiency objectives, supports FM Systems as the ideal choice for LaRC's workspace management needs. During the research process, vendor demonstrations were conducted for both Tririga and Archibus, both of which were found to be inadequate in meeting all specified requirements. Notably, Tririga's hardware was sourced from a third party, and its conference room 'people counters' used video cameras rather than infrared devices, which may compromise user privacy. Market research confirmed that although several workspace management tools are available, none could seamlessly integrate with LaRC's existing infrastructure needs. FM Systems remains the only vendor with a validated implementation within NASA, ensuring consistency across centers and compliance with FedRAMP, which facilitates a smooth transition from on-premises to SaaS solutions.

2. **What is the impact to the government if another vendor/brand is used?** Include any dollar, schedule, or compatibility impacts if possible.

FM Systems' existing FedRAMP authorization and NASA-specific security vetting significantly streamline the process and reduce the cost associated with obtaining system Authority to Operate (ATO). In contrast, alternative systems would necessitate comprehensive security assessments, potentially jeopardizing the project timeline. Selecting another product would also result in a lack of mechanisms to gather the necessary data for monitoring workspace utilization. FM Systems stands out as the sole vendor capable of providing a fully operational, compliant, and integrated workspace management solution within the required timeframe, at a reasonable cost, and with minimal operational risk. Its demonstrated success at LaRC, compatibility with current hardware, FedRAMP authorization, and alignment with NASA's enterprise-wide space optimization objectives position it as the only feasible choice to support the mission-critical workspace initiatives at both LaRC and HQ.
