

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)? ☐ Yes ☒ No

Contracting Activity: [REDACTED]

Project/Program Name: Tempo Software Maintenance and Support

Purchase Request / Local ID Number: [REDACTED]

Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

[REDACTED] has a requirement for a firm fixed price (FFP) acquisition renewal of the maintenance and support package for Tempo software by Andromeda Systems Incorporated., dba TFD Global, a spares modeling tool that enables optimization over time to include obsolescence and technical refreshes, to maintain and update the current license of the software. The estimated total cost for one year of maintenance and support for the current licenses is [REDACTED] based on market research quote and will be funded with [REDACTED].

Section C: Justification for Soliciting from a Single Source or Brand Name

Andromeda Systems Incorporated, dba TFD Group, is the publisher, holder of all copyrights, and sole source North American provider of technical support and sales of Tempo software. Andromeda Systems Incorporated acquired Systems Exchange Inc. in [REDACTED] and became the owner of TFB Global and all its products. TFD Global is the only source that can provide maintenance and system patches to the current licenses of Tempo that required an initial investment of [REDACTED]. The Tempo software provides unique capabilities in spares modeling, enabling the optimization of spares over the life cycle. Tempo is the only currently available readiness-based sparing (RBS) software that can address the impact of time in a single model run. This software will enable the Government to better plan for the life cycle spares cost of a weapon system. Tempo is the intellectual property of TFD Global, the software designer, and TFD is thus the only firm that can supply and maintain Tempo. The [REDACTED] has already made a significant investment in the purchase of the Tempo licenses and should maintain this investment given the software's proven capability to save programs' investment on spares. Without keeping this software up-to-date and functioning properly, the Government will be unable to provide the spares modeling analysis given real world scenarios and considerations to weapon systems. Examples of other RBS model alternatives include Aircraft Sustainability Model by LMI and OPUS10 by Systecon. Aircraft Sustainability Model is free for the [REDACTED] to obtain but lacks most of the functionality required by [REDACTED] for spares modeling. This software is currently undergoing a rewrite to change programming languages. As a result, the Government may have to wait years for LMI to develop the software to a point where [REDACTED] can use it to meet the needs of program offices. OPUS10 is an alternative COTS software that would cost the Government [REDACTED] to obtain a [REDACTED] license with an annual support fee [REDACTED] and require [REDACTED] of training for each of the [REDACTED] that would use the software at a cost of approximately [REDACTED]. Additionally, OPUS10 is a steady state model and does not provide the time-phased optimization capability of Tempo without the purchase of additional software. This time-phased optimization capability is critical to new program acquisitions that are concerned with initial spares needs. Without this capability, [REDACTED] would not be able to effectively plan for program acquisition and would not be able to fully optimize the program spares budget to achieve their required availability key performance parameter.

Section D: Efforts to Obtain Competition

Market research, conducted initially in [REDACTED] and annually since by [REDACTED] with extensive knowledge of spares modeling, did not identify any other companies that can provide the desired software or software with the same capability. This market research was conducted through Internet research and a trial period with other software vendors for Readiness-Based Sparing models. The Tempo software is the intellectual property of TFD Global. As such, TFD is the only company that can maintain the software and provide critical updates and patches to the current licenses.

Single Source Justification (Simplified Acquisition)

TFD Global, Andromeda Systems Incorporated
330 Crossings Blvd, Ste 300, Orange Park, FL 32073

[REDACTED]
[REDACTED]

Section E: Steps to Preclude Future Single Source or Brand Name Awards

[REDACTED] will continue to monitor the market to determine if other products meet the Government's needs. The Government will continue to conduct market research using catalogs, the Internet, attendance at industry events, and other resources to locate solutions to meet the Government's needs.

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.

[REDACTED]
