

NOTICE OF INTENT TO SOLE SOURCE

Contracting Opportunities Announcement Type: Special Notice

Announcement Number: AMDTCNOI2500795

Subject: Altair Enterprise Suite Licenses

Introduction

This is a notice of intent, not a request for a quotation. A solicitation document will not be issued, and quotations will not be requested.

Purpose

The NIST Engineering Laboratory (EL) serves as a world-class resource for developing and promoting the use of science-based tools—measurements, data, models, protocols, and reference standards—to enhance the global competitiveness of U.S. industry through innovations in building materials and construction technology and the safety, security, and sustainability of the nation's buildings and physical infrastructure. The purpose of this requirement is to obtain an Altair Enterprise Suite software license required for continuation of research projects in EL that are currently using the Altair HyperWorks and Monarch software packages. Further, various research projects in Division 731 require the use of HyperWorks software for analysis of structural performance under multiple hazards, including failure investigations. HyperWorks Software is required for mesh generation, pre-processing, and post-processing of finite element models. Full compatibility with existing HyperWorks models, macros, and results files is required, as well as with past and current NIST EL research protocols, including existing Monarch data models, is required. The performance period shall be a 12-month base period with an estimated start date of October 1, 2025.

Authority

This acquisition is being conducted under the authority of FAR Subpart 13.106(b)(1) allowing the Contracting Officer (CO) to solicit from one source. The North American Industry Classification System (NAICS) code for this acquisition is 513210 – Software Publishers with a small business size standard of \$47.0 million.

Description

See attached Statement of Work (SOW) document.

Sole Source Determination

The sole source determination is based on the following:

Altair Enterprise Suite software includes the HyperWorks and Monarch packages. HyperWorks is used for mesh generation, pre-processing, and post-processing of finite element models. Monarch software is required for data extraction, cleansing, and manipulation, including format conversions in preparation for data analytics.

Altair Engineering, Inc., is the only developer of HyperWorks and Monarch. The company has proprietary rights. HyperWorks software is required for continuing research projects in Division

731 related to structural performance under multiple hazards, including failure investigation. HyperWorks is the only package that offers full compatibility with the following items developed for these projects: (1) a large number of existing finite element models, (2) a large number of post-processed finite element model results files, and (3) macros created for automatic model generation. Continuing research projects in EL also require the use of Monarch software for data extraction and manipulation, and full compatibility with existing Monarch data models is required. The use of different software would be a major interruption to these projects, and years of research effort could be lost should the required licenses not be procured. No third parties are authorized to supply this software to US Government officials.

Information for Interested Parties

Interested parties that believe they could satisfy the requirements listed above for NIST may clearly and unambiguously identify their capability to do so in writing by or before the response date for this notice. This notice of intent is not a solicitation, and questions will not be entertained.

All responses to this notice of intent must be submitted via email to jennifer.lohmeier@nist.gov so that they are received no later than **May 19, 2025 at 10:00** AM, Eastern Time.

Each response shall include the following Business Information:

- a. Contractor Name, Address,
- b. Point of Contact Name, Phone Number, and Email address
- c. Contractor (SAM) Universal Entity Identification (UEI)
- d. Contractor Business Classification (i.e., small business, 8(a), woman owned, HUBZone, veteran owned, etc.) as validated in System for Award Management (SAM). All offerors must have an active registration in www.SAM.gov.
- e. Capability Statement
