

NSSC PRODUCT RENEWAL STATEMENTS OF WORK & ATTESTATION OF CONTINUED NEED

1. Descriptions/Requirements.

Bravium Best Practice Engine (BPE) and Bravium Upgrade Assistant (BUA) [initial renewals (co-terming)]

- BPE is a ServiceNow third party plugin providing automated code review, code quality scanning, best practices alignment, and reporting on these metrics and is licensed separately from ServiceNow.
- BUA is also a ServiceNow third party plugin delivering a powerful instance-governance-application in the ServiceNow ecosystem offering deeper analysis capabilities than anything else available. End-user gains better control of the customization of your instance while keeping ServiceNow version up-to-date and reducing the time required to upgrade when using Upgrade Assistant.

In the case of product non-performance, the NSSC ITAM should be notified immediately in order to liaise with the current Provider and/or the Original Equipment Manufacturer (OEM).

2. Periods of Performance (POP):

- Year 1 of 5 - POP will be 6/4/2025 through 6/3/2026
- Year 2 of 5 - POP will be 6/4/2026 through 6/3/2027
- Year 3 of 5 - POP will be 6/4/2027 through 6/3/2028
- Year 4 of 5 - POP will be 6/4/2028 through 6/3/2029
- Year 5 of 5 - POP will be 6/4/2029 through 6/3/2030

3. Characteristics and Scope

- Bravium product users will sign in using only their own Agency-Issued credentials and have been cautioned about never sharing sign in credentials with others.
- Any problems encountered will be referred, first, to the end-user's immediate superior. If resolution is cannot made, the end-user will initiate a ServiceNow Ticket to the Enterprise Service Desk (ESD)
- Whether the end-user works remotely on onsite, continual attention to the safeguarding of personal/private information is paramount.
- If necessary, escalation of the reported concern/product-defect will be made to the appropriate levels of NSSC management.

4. Impact (Non-renewal).

The overall impact to ServiceNow and all users would be incalculable. The NSSC's ServiceNow platform has been/continues to be optimized in all respects thereby ensuring contractual SLAs and SLIs being met without interruption. Discontinuation would also result in many highly-customized applications having to be reverse-engineered [back] to their *out-of-the-box* states which would adversely impact all applications.

5. Place of Performance:

- NASA Shared Services Center, Building 1111, Stennis Space Center, MS (or remotely if authorized).
