

REQUEST FOR INFORMATION – FOLLOW UP #2
KC-46 Landing Gear PBL

The KC-46 Landing Gear acquisition team is seeking additional feedback from industry representatives regarding the support for KC-46 Landing Gear end items (1x nose and 2x main) and field level subcomponents. The KC-46 Landing Gear acquisition team is looking to industry to help shape the strategy of this effort through their open comments/feedback on the questions below.

Questions:

1. The United States Air Force (USAF) is seeking clarification on Industry's ability to provide a comprehensive solution for the KC-46 landing gear overhaul/remanufacture strategy. Specifically, we want to make it clear to industry that the required CMM data *may not* be releasable until after the contract is awarded, although the winning contractor will receive access at that time. Therefore, the government is requesting industry feedback on your ability to deliver a firm-fixed-price proposal, with the understanding that technical evaluation criteria would be established to evaluate contractor proposals without the CMM data. USAF is requesting a statement outlining your ability to provide a proposal without access to the CMM data, addressing the challenges this data limitation presents in developing a proposal.

2. Assuming the USAF does not grant access to the required CMMs prior to award, can your company independently secure access to the required CMMs for the KC-46 landing gear overhaul/remanufacture depot-level maintenance work *before* the contract is awarded?

The government is accepting responses to this request for information via email only. Please provide written responses to the Contracting Officer and Program Manager by May 2, 2025 at the following email addresses:

Kyle Swaner
Contracting Officer
kyle.swaner@us.af.mil

Austin Gardner
Program Manager
austin.gardner@us.af.mil
