

Single Source Justification (Simplified Acquisition)**Section A: General Contract Information**Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)?☐ Yes☒ No

Contracting Activity: PZ (Arnold) OL Holloman

Project/Program Name: Silvus Radios Repair

Purchase Request / Local ID Number: [REDACTED]

Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

The 746th Test Squadron (746 TS) requires the repair of three (3) Silvus radios by replacing internal components and getting the radios to the original configuration by the Original Equipment Manufacturer (OEM). The radios are used to enable remote control of squadron test assets to enable effective and efficient testing operations. The radios are the only spare radios on-hand to sustain two permanent base stations needed to establish an effective radio network, impacting up to 80% of the squadron's test capabilities.

Section C: Justification for Soliciting from a Single Source or Brand Name

This is a sole source requirement to Silvus Technologies Inc. and is expected to be a Firm Fixed Price contract.

The radios are proprietary and manufactured exclusively by Silvus. Silvus is also the only entity qualified to repair the radios. The company provided a letter to confirm. Using any other vendor would void the warranty of the radios and not guarantee the proper repair.

Silvus brand radios and components are required due to the compatibility/interconnectivity with other existing systems at the 746 TS. As of 2025 the 746 TS has acquired at least ~\$600K worth of Silvus brand radios and products to conduct a complete overhaul of a test asset remote command and control capability. The radios currently requiring repair were included in that procurement. If denied this sole source repair contract, the 746 TS would then have to buy the radios at original cost which would require additional labor cost in the form of a procurement contract, and would cost at the very least \$45K for the three radios which would be more than double the price of the quoted repairs. In the worst case, should the 746 TS have to go through the process of procuring completely new radios, given the inability to sustain the Silvus communications infrastructure, the effort would be at the very least a 4 to 6 month project and delay any scheduled testing or system fielding at an unknown cost to the government. To perform technical reviews, integration, testing of any other type of radio, and to purchase the new radios, the costs would be at the very least an additional \$600K as this would probably entail a similar large scale contract to what was previously accomplished.

Section D: Efforts to Obtain Competition

The Government is continually reviewing trade journals, such as the GPS World journal that continues to keep up-to-date knowledge regarding products and capabilities, attending trade shows, such as the Joint Navigation Conferences each year, and surveying the market in the event that future requirements may be satisfied in a competitive environment.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

Market research has included Internet and GSA searches, reviewing historical acquisitions, discussions with other possible sources and finally the manufacturer. Efforts will be made to continue to monitor and conduct market research for additional resources.

Single Source Justification (Simplified Acquisition)

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
