JUSTIFICATION FOR AN EXCEPTION TO FAIR OPPORTUNITY (JEFO)
CONTRACT SPE2D1-17-D-0040

1. Defense Logistics Agency (DLA) Troop Support, Medical Supply Chain, Capital Equipment Division, is the contracting activity.
2. This justification is for the purchase of Fuji Healthcare Americas Corporation (Fuji) radiology items for the United States Army Landstuhl Regional Medical Center on a sole source basis. The upgrades and additions to hardware, software and services are required to support the new configuration. The new Digital Imaging Network – Picture Archiving and Communication Systems (DIN-PACS) configuration will support patient care at the Spokes and allow them to stand alone if the communication to the Hub fails. The Landstuhl site is currently utilizing Fuji Synapse PACS. The items are available on Fuji's DIN-PACS IV contract, SPE2D1-17-D-0040, which expires August 21, 2027.
3. This acquisition is for the purchase of Fuji Synapse Downtime servers for the Landstuhl Regional Medical Center. [REDACTED]
4. The authority waving the competition requirements is FAR 16.505(b)(2)(i)(B), as only one awardee is capable of providing the supplies or services required at the level of quality necessary because the supplies or services to be ordered are unique or highly specialized in order to meet customer requirements.

The Landstuhl Regional Medical Center in Germany uses a hub and spoke model to provide healthcare to a large military community. This site has been determined to be a "Hub". The "Hub and Spoke" arrangement is based on a requirement from the Defense Health Agency (DHA) to modernize and streamline healthcare services for all military treatment facilities (MTFs) worldwide by sharing resources and reducing the overall equipment load and hardware footprint. A "Hub" will be a single predetermined location where all data is sent and stored for multiple "Spoke" sites.

Additionally, the "Hub and Spoke" model allows for a continuity of workloads between connected sites, as personnel from different sites have the ability to assist with workloads at other sites, such as performing remote, real-time evaluation of patients and/or review of studies. This is a necessity for military environments where radiological personnel shortages often exist due to personnel changing duty stations, or when a "Hub and Spoke" connected site's workload is higher than normal. Additionally, this model reduces the need for every site to contain the vast array of equipment required for a DIN-PACS system, thus, reducing the overall equipment footprint for all MTFs.

[REDACTED]

[REDACTED]

Furthermore, the DIN-PACS systems must be capable of flawlessly interfacing with the existing sites, as well as have the ability to flawlessly share multiple workflow lists with any of the sites in the “Hub and Spoke” arrangement. The site is currently utilizing Fuji DIN-PACS, and upgrades and additions to hardware and/or software licensing are required to support the new Hub and Spoke configuration [REDACTED]

[REDACTED] This is required in order to remotely access shared database/server resources, provide bi-directional communication, and access other shared DIN-PACS functionality. In short, the “Hub and Spoke” arrangement requires that all spoke sites also be Fuji systems, as no other vendor’s software interface can provide access to the Hub site’s resources due to Fuji’s proprietary DIN-PACS software structure.

5. The items are available on Fuji’s DIN-PACS IV contract SPE2D1-17-D-0040. DLA Troop Support has previously determined Fuji’s DIN-PACS IV contract pricing to be fair and reasonable [REDACTED]
6. There are no additional facts supporting the use of this JEFO.
7. In an effort to overcome barriers to fair opportunity on subsequent acquisitions, market research was performed by DLA Troop Support and DHA in June 2024. This market research confirmed that no other vendors among the DIN-PACS IV contract holders can offer the proposed software or licenses required for connectivity with the Fuji DIN-PACS currently installed at the existing Hub sites. DIN-PACS IV vendors have the opportunity to add products that fall within the scope of the DIN-PACS IV contract at any time; however, currently there are no other known DIN-PACS IV vendors that would be able to meet the current requirement. Fuji has the knowledge needed to install the auxiliary systems in order to interface with the existing Hub sites and comply with all requirements including cybersecurity and Risk Management Framework (RMF) certifications. Additionally, no other DIN-PACS software will connect with the existing Fuji equipment at the Hub sites due to the proprietary nature of the software interface.

8. As the Contracting Officer, I hereby certify that the information contained in this justification is accurate and complete to the best of my knowledge and belief.

[REDACTED]

DATE

Contracting Officer
DLA Troop Support, FSD

I hereby certify that the requirements which form the basis of this justification are accurate, that these supplies meet the Government's needs, and that this justification is accurate and complete to the best of my knowledge and belief.

[REDACTED]

DATE

Bio-Medical Engineer
DLA Troop Support, FSDB

I have reviewed this justification and recommend approval.
