

HMIF SoSAR Industry List

Organization	General Competancies
AeroVironment	Our Mission Inventing Advantage AV's uniquely talented team of intelligent, creative, and dedicated people are determined to improve outcomes for our customers, and our planet, by redefining what's possible today. Whether it's an AV uncrewed aircraft giving warfighters beyond-line-of-sight intel, an AV unmanned ground vehicle protecting emergency responders and the public, or an AV high altitude pseudo-satellite expanding Internet access around the globe, our cutting-edge innovations get results.
Amazon	Amazon.com, Inc., doing business as Amazon, is an American multinational technology company engaged in e-commerce, cloud computing, online advertising, digital streaming, and artificial intelligence.
Anduril	Pioneering solutions for the software-defined conflicts of tomorrow. The next generation of military technology will depend less on advances in shipbuilding and aircraft design than on advances in software engineering and computing. Unlike traditional defense contractors who focus primarily on hardware, Anduril's core system is Lattice OS, an autonomous sensemaking and command & control platform that serves as the core platform for our suite of capabilities.
Anduril	Our Technology Pioneering solutions for the software-defined conflicts of tomorrow. The next generation of military technology will depend less on advances in shipbuilding and aircraft design than on advances in software engineering and computing. Unlike traditional defense contractors who focus primarily on hardware, Anduril's core system is Lattice OS, an autonomous sensemaking and command & control platform that serves as the core platform for our suite of capabilities.
Applied Intuition	Software and artificial intelligence are rapidly transforming the development of next-generation vehicles. Applied Intuition's software solutions help automakers, Tier 1 suppliers, and companies across the trucking, construction, and agriculture industries navigate this transition and bring software-defined vehicles to market safely. Applied Intuition's mission is to accelerate the world's adoption of safe and intelligent machines. If we do our work correctly, we will save lives. Our mission applies to the automotive industry, but it is much broader than that. Everything that moves—from trucks to construction equipment and military vehicles—will move autonomously one day.
Battelle	The foundation of our organization's mission can be traced back to the work of steel industrialist Gordon Battelle. In his 1923 Last Will & Testament, Gordon Battelle expressed his vision to translate scientific discovery and technology, ... for the purpose of education in connection with and the encouragement of creative and research work in the making of discoveries and inventions . . . to do the greatest good for humanity.
BlueHalo	Our focus is on safeguarding both military and civilian sectors through AI-driven technologies that quickly identify and mitigate uncrewed threats. We pride ourselves on creating innovative solutions that not only protect airspace but also ensure rapid deployment and efficient mission management. BlueHalo provides fully integrated platforms that include proprietary precision target acquisition and tracking systems; integrated perimeter security systems; and autonomous offensive swarming sUAS platforms and payloads.
Bluewhite.AI	Bluewhite's diverse team of engineers, farmers, technicians, and field operators have decades of experience in autonomous technologies. Equally important, our shared passion, values of fellowship, love of the land, and innovation enable us to deliver the best autonomous solution to you and your farm.
BRINC	Our mission at BRINC is to revolutionize public safety by leveraging technology to de-escalate dangerous situations. Each drone deployed to a dangerous situation is one less individual in harm's way, and a potential life saved.

Organization	General Competancies
DCS	DCS creates innovative technology solutions for every major branch the U.S. military and Intelligence Community Agencies. DCS employees develop successful working relationships with our customers to ensure that we meet our customers' expectations and get the job done right.
Devron AI (Adelphi Data)	Adelphi is building the technology for data sharing in the intelligence community. Our technology revolutionizes secure data discovery across disparate sources. Entity Matching Adelphi employs sophisticated privacy enhancing techniques to protect sensitive information while enabling entity matching across sources. This ensures that analysts can access comprehensive datasets without compromising security. Enterprise-Grade Data Connectors Adelphi's team has been entrenched in legacy databases inside the IC for over a decade, and we've produced best in class data connectors with commonly used data sources to enable fast data sharing. Rethinking Search in the Intelligence Community Adelphi's Data Network enables disparate datasets to finally be discovered at the speed of Mission.
Dragonfly Pictures Inc	Persistent Cameras and Extended Communications The tethered design allows the UAS to remain airborne for extended periods, effectively providing near-continuous operation. A tethered drone acts as portable mast or instant tower to provide ISR, communications, and video for commercial, military and security services.
Epirus	We are the "Neo Prime" for today's asymmetric warfare. That means we innovate, build and deliver ahead of the need - remaining one step ahead of the competition. Our flagship product, Leonidas, is the most sophisticated high-power microwave system for the counter UAS mission, and was delivered to the U.S. Army in record time. Epirus offers a range of contracting methods, from OTAs to IDIQ contracting vehicles, and as-a-service models to rapid prototype solutions, we rapidly go from concept to delivery for our partners. Working with Epirus means innovating with impact.
Forterra	Forterra is a leading provider of autonomous systems for ground-based movement in the working world. The company is among the earliest innovators in the field of driverless technology, focused on building systems which protect front-line soldiers and enable civilian workers in our industrial base.
GDLS	General Dynamics Land Systems is a global leader in the design, development, production, support and sustainment of tracked and wheeled military equipment. We partner with our customers, suppliers, stakeholders and government entities to deliver solutions that protect freedom across the world.
GTRI	The Georgia Tech Research Institute (GTRI) is the nonprofit, applied research organization of the Georgia Institute of Technology (Georgia Tech). We develop advanced technology solutions and large-scale system prototypes to address the most difficult problems in national security, the state of Georgia, and the overall human condition.
Kongsberg	KONGSBERG is a world leading supplier of land-based defence systems ranging from communications to weapons control and surveillance.
Kutta	We are a trusted leader in providing safety-critical uncrewed systems software and products. We develop innovative and reliable Command, Control, and Communications (C3) software, components, and subsystems with autonomous applications for defense and national security customers.
L3 Harris	At L3Harris we anticipate and mitigate risk with end-to-end solutions that meet our customers' mission-critical needs across all domains.
Lockheed Martin	For decades, Lockheed Martin has been delivering advanced autonomous systems to the U.S. military and allies to meet our customers' most demanding missions. Through strategic investments and nontraditional partnerships, we're combining commercial best practices with our expertise in defense tech to bring cutting-edge autonomy capabilities to the defense industry rapidly and affordably

HMIF SoSAR Industry List

Organization	General Competencies
Microsoft	It's known for its wide range of products and services, including software, cloud computing, video games, and hardware, and it has been a major force in the personal computer revolution. We're living in an era in which technology has the potential to power awesome advancements across every sector of our economy and society. This places us at a historic intersection of opportunity and responsibility. Our mission has never been more important. To realize it, we must create a future that benefits everyone.
MITRE	a not-for-profit organization, MITRE acts in the public interest by delivering objective, cost-effective solutions to many of the world's biggest challenges. We operate FFRDCs—federally funded research and development centers—and provide technical expertise, stability, and continuity to government agency sponsors. FFRDCs Put Research to Work MITRE powers advances in national defense, aviation safety, GPS, financial systems, healthcare, cybersecurity, and more—advances that make your life better. We're 65+ years into our mission and just getting started. Work with us for public good.
Neya Systems	Since 2009, Neya Systems has been at the forefront of developing advanced autonomous systems for complex, off-road environments.
Open AI	OpenAI is an AI research and deployment company. Our mission is to ensure that artificial general intelligence benefits all of humanity. Our vision for the future of AGI Our mission is to ensure that artificial general intelligence—AI systems that are generally smarter than humans—benefits all of humanity.
Overland AI	Raising the bar every time our technology is fielded. We are setting new benchmarks in ground autonomy. Our field deployments consistently exceed expectations, forging unparalleled standards in innovation, efficiency, and reliability. We founded Overland AI to transform land operations by delivering the most advanced and dependable ground autonomy solutions to the U.S. Military and Partner Nations. Our world-leading team combines the best engineering and scientific talent that the US has to offer with veterans who have first-hand experience on the front lines. Our technology has been validated by DARPA and currently supports a range of programs in the U.S. Army, Marine Corps, and Special Operations Command.
Palantir	We make products for human-driven analysis of real-world data. We're focused on creating the world's best user experience for working with data, one that empowers people to ask and answer complex questions without requiring them to master querying languages, statistical modeling, or the command line. We build our company around mission-driven engineering. We're engineers, not academics. At our offices around the world, we've assembled a team that combines practical expertise in distributed systems infrastructure, big data processing, user experience design, and data science. Whatever their role, each Palantirian combines an uncompromising engineering mindset with an unwavering focus on executing in service of the mission.
Parry Labs	At Parry Labs, we're redefining the edge where new capability meets mission-proven certainty. We deliver digital combat power with open software architecture, small-form factor hardware and engineering to keep pace with the speed of modern warfare and enable a decisive combat advantage for the defense community. We make the networked connectivity of every asset, from warfighters to weapon systems, the dominant force in a digital battlespace, all in a day's work.
Primordial Labs	Primordial Labs is developing the next-generation human-machine interface, Anura, to empower warfighters to be active collaborators, not passive observers, when teaming with uncrewed systems (UxS).
QinetiQ	We offer our customers world-class expertise in advice, services (particularly test and evaluation) and innovative technology-based products. We deploy our scientific and technological knowledge, proven research capabilities and unique, purpose-built facilities to provide both services and products that meet the needs of a wide range of global customers. We operate primarily in the defence, security and critical national infrastructure markets.

Organization	General Competencies
Redcat (Teal)	Red Cat (Nasdaq: RCAT) is a drone technology company integrating robotic hardware and software for military, government, and commercial operations. Through two wholly owned subsidiaries, Teal Drones and FlightWave Aerospace, Red Cat has developed a Family of Systems. This includes the Black Widow™, a small unmanned ISR system that was awarded the U.S. Army's Short Range Reconnaissance (SRR) Program of Record contract.
Ricardo Defense	Our global team of consultants, environmental specialists, engineers and scientists deliver innovative and cross-sector sustainable solutions that help our clients to create a safe and sustainable world.
SAIC	SAIC focuses the power of data and AI toward our customers' specific defense and intelligence mission outcomes, solving complex challenges with speed and efficacy. We have the expertise and technologies to integrate disparate mission systems and networks and turn data into lifeblood that drives battle management insights and decision-making from operations center to mission edge.
Saronic	Through improved sensors and surveillance systems, advanced communication technologies, and enhanced situational awareness tools, we enable military commands to better detect, track, and respond to potential threats in the maritime domain. By providing naval and maritime forces with the most intelligent autonomous surface vessels available, we directly increase their ability to address the emerging challenges of the future, and revolutionize the future of naval warfare.
Scout AI	Enable the largest robot army in the world through intelligent physical AI for the US military.
Shield AI	Building an AI & Autonomy Backbone, We leverage our AI and Autonomy Backbone to build and deploy the world's best AI Pilots. Hivemind is the best-in-class autonomy stack for aircraft-tested, safe, and modular and human-directable.
Skydio	Mission-ready. Day or night. Skydio drone programs help even the most dangerous work get done safer, smarter, and faster through remote autonomous flight. From Drone as First Responder to automated inspection and site security, Skydio helps you get the intelligence you need to make the best decisions. Gather more intel over more area with smart, survivable sUAS. Blanket entire regions with the AI-powered Skydio X10D to create a sensing grid that gathers data faster, smarter, and safer than boots on the ground. Skydio sUAS utilize secure standards to talk to other devices locally, across battlefields, and around the world so allies have a common operating picture to fight as a team of teams. Get our industry insights paper for more details on readiness.
Stratom	Stratom provides strategic services and solutions for a wide range of customers, from the public sector to the military. From product design and software engineering to mechanical and electrical systems engineering, value reengineering, program management, requirements analysis, lifecycle management and more, Stratom's deep expertise enhances projects and solves our clients' most pressing engineering, professional and technical problems.
Striveworks	Striveworks is a pioneer in responsible MLOps for national security and other highly regulated spaces. Striveworks' Chariot MLOps platform enables organizations to deploy AI/ML models at scale while maintaining full audit and remediation capabilities. Founded in 2018, Striveworks was highlighted as an exemplar in the National Security Commission on Artificial Intelligence Final Report. In 2023, Striveworks was recognized on the Deloitte Technology Fast 500™ list as one of North America's fastest-growing companies in technology. Only when both process as code and automated remediation are in place can we then talk meaningfully about MLOps becoming a self-managing process. With humans on—and not in—the loop of MLOps, we will have a framework that will truly scale to support exponential demand for model analytics.
SwRI	SwRI is an independent, nonprofit, applied research and development organization dedicated to technology development and transfer.

HMIF SoSAR Industry List

Organization	General Competencies
T2S	T2S Solutions is an innovative, agile, mission-focused product and solution provider specializing in Rapid Prototyping and Experimentation, Systems Development, Integration, Test and Sustainment. Our customers include the DoD, Mission Partners and the Intelligence Community, Industry Partners, and other Government Agencies.
Textron	Textron Inc. (NYSE: TXT) is one of the world's best known multi-industry companies, recognized for its powerful brands such as Bell, Cessna, Beechcraft, E-Z-GO, Arctic Cat and many more. The company leverages its global network of aircraft, defense, industrial and finance businesses to provide customers with innovative products and services.
VES	Headquartered in Aberdeen Proving Ground, Maryland, VES LLC is a small business that was established in 2014. Our team is composed entirely of engineers who are dedicated to solving the most challenging Software Systems Integration problems faced by the DoD. Our core competencies include developing custom infrastructure software, integrating embedded platform and command post systems, and prototyping emerging technologies for use in tactical edge architectures.
