436—Fort Harrison VA Medical Center	Fort Harrison VA Medical Center	3687 Veteran's Drive, Fort Harrison MT 59636	OS cabinet upgrade, Server 2016 Upgrade

II. Functional and technical specifications

1. The Contractor is required to provide the upgrade to Windows 10 IoT Enterprise LTSC 2021 (XTE upgrade) and Window Server 2019 from the current configuration. The upgrade shall include any necessary hardware and software changes for the upgrades to function such as a touch screen monitor and keyboard, C++ interfaces, etc. Vendor shall provide all labor hours, parts, supplies, required for installing and configuring each cabinet, server, and workstation as applicable. The contract shall provide all licenses for both the production and test servers. It shall include labor hours to re-build any OIS interfaces due to existing C++ non-compatibility with Windows 2019 and any additional labor hours to install, configure the system to ensure the system is fully operational after the upgrades.
2. The vendor shall ensure that all items within the Omnicell ADC system operates as the original equipment manufacturer (OEM) intended.
3. All pharmacy cabinets, workstations and servers shall be upgraded (Attachment 1).
4. Vendor shall provide a new TRM chip, per cabinet upgrade, to leverage security and encryption benefits from the Microsoft OS platform.
5. Vendor shall provide an electronic copy of user/training manual.
6. Vendor shall be in compliance with VA network security regulation according to VA Directive 6500 and 6550.
7. Vendor shall provide professional services for Clinical and Technical actions: including but not limited to installation, configuration, workflow testing, integration testing with EHR, go-live testing support, and a post assessment support.
8. Vendor shall provide all necessary licenses including, but no limited to: SQL, Window Server License, remote access licenses required to perform the upgrade and use the system after the upgrade is complete.
