1. Description:

The Space Development Agency (SDA) anticipates soliciting proposals from industry for the Proliferated Warfighter Space Architecture (PWSA) Tranche 3 Transport Layer Upsilon (T3TL_υ). The T3TL_υ constellation will consist of four (4) orbital planes with ten (10) T3TL_υ SVs in each plane, and the government intends to make two awards of twenty (20) vehicles each. Every T3TL_υ SV will be interoperable with all PWSA SVs, regardless of vendor. The T3TL_υ SVs will include optical communications terminals (OCTs) to support in-plane and cross-plane crosslinks, links to terrestrial OCTs (ground, air, and maritime), and crosslinks to compatible SVs external to the Transport Layer. The T3TL_υ SVs provide TACSATCOM bidirectional communications links with select tactical users worldwide via UHF and S-band communications, as well as Integrated Broadcast Service (IBS) – Low Earth Orbit (LEO) (IBS-L) space-based broadcast of threat warning, situational awareness, targeting, and C2 data to warfighters worldwide via UHF communications.
