

STATEMENT OF WORK

1. Objective/Requirements

NASA Ames Research Center has a requirement for Mend AppSec License Renewal.

2. Characteristics, Scope, and Specs

Qty	Description	Part #
30	Mend AppSec Platform Mend Static Application Security Testing solution tool that detects vulnerabilities within application's custom source code. • A single web user-interface for managing all engines (SCA/SAST/Container) • OSS vulnerability scanning for over 200 technologies, including source file matching • OSS license compliance • Malicious Package Protection • Container Scanning for open source vulnerabilities • CVE reachability analysis • Complementing Exploitation maturity indications (EPSS) • SBOM generation • Custom, first party source code protection • Runtime analysis information • Kubernetes integration • Cloud registries integration • SCM repository integrations (Azure, DevOps, Bitbucket, GitHub, GitLab) • Dashboard, alerts, reporting and workflow automation • Native access with IDEs • SSO/SAML support • Customer Success Management • Issue tracking integrations (Jira) • Automated remediation and suggested fixes (Renovate) • API integration • Mend Premium Support	MD-APSC-PLT

3. Place of Performance

NASA Ames Research Center

4. Period of Performance

2/27/25 – 2/26/25
