

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)? ☐ Yes ☒ No

Contracting Activity: 7th Contracting Squadron, Dyess AFB Texas

Project/Program Name: Install & Move Secondary Monaco Server

Purchase Request / Local ID Number: TBD

Estimated Contract Cost (including Options): XXXXXXXXXX

Section B: Description of the Supplies/Services Required

Monaco Enterprises, Inc. (MEI) serves as the alarm system for both Fire and Security. 7 SFS still has numerous facilities operating on Monaco security. The primary server is at Bldg 5013 with the secondary/redundant server in Bldg.6117 but will need to be move over to Bldg 7232. Its imperative to have a secondary server operational in case of an emergency, were the primary server were to become offline. All items described in the Scope of Work presented in the quote from MEI dated Nov 4, 2024 shall be accomplished:

The contractor shall provide all required labor, material, tools, and equipment to perform the following tasks.

a. Bldg.7232 RM 224 will be the location of the Comm room supporting all of the BDOC communication capabilities. The contractor shall move the Monaco server equipment from Bldg. 6117 and transfer it along with the setup and communication online at Bldg. 7232 Rm 224.

b. Monaco Equipment

- i. Consist of the following servers/rack and workstations. One (1) Alternate Fire RFM-X modem. One (1) Main Security Radio Wire RFM. One (1) Alternate Security Radio. One (1) Main Security Hard-Wire RFM. Two (2) Telebyte communication Modems that monitor 7 Muns Intrusion Detection System. One (1) D21 Secondary server. One (1) D21 C5 server. UPS system. One (1) C4 I-button Monitor and tower. Three (3) Monaco monitors.

c. **Testing Phase.** A 30-day testing phase shall be initiated as soon as servers and monitors are connected and communicating properly with the primary server. The contractor shall perform a redundant takeover test. If no errors are identified after the 30-day testing phase, 7 SFS/S5E will accept the work as complete and satisfactory.

Section C: Justification for Soliciting from a Single Source or Brand Name

Monaco Enterprises, Inc. (MEI) is the original manufacturer and service provider for the Fire, Security, and Life Safety Equipment currently installed at Dyess Air Force Base, TX. MEI has developed proprietary software and collaborates with licensed vendors, which is then licensed directly to end users. MEI retains exclusive ownership of this software and does not authorize third parties to modify or add to MEI software or equipment. The system has been carefully designed by a MEI Applications Engineer to ensure seamless integration with the existing MEI D-21 system at Dyess AFB. Soliciting directly from MEI is essential to maintaining the integrity and compatibility of the existing Monaco equipment and software. The upgraded equipment is intended to integrate fully with the current Monaco system, ensuring both operational efficiency and continuity. Therefore, the 7th Contracting Squadron will solicit this product as a single source from Monaco Enterprises, Inc., to preserve the system's functionality and integrity.

In addition, a sole source letter is attached in KTFS from the contractor describing the unique capabilities of their proprietary technology, the necessity of their services for maintaining system compatibility and operational continuity, and the reasons why no alternative vendors can provide an equivalent solution without compromising the integrity and functionality of the existing system. The letter also outlines the technical and operational factors that support the decision to procure the equipment and services from them as the single source.

Section D: Efforts to Obtain Competition

Historical data to include the Justification and Approval and Market Research from the previous contract (FA466123P0099) has been reviewed to ensure price fair and reasonable can be established. Only one responsible source and no other supplies or services will satisfy this Dyess AFB requirement. The Government has determined that the proprietary nature of the MEI system and the specific integration requirements create substantial barriers to competition at this time. In the future, the government will continue to look for acquisition strategies that do not limit the government to Single Source awards.

While the government strives to avoid single source requirements and promote competition where possible, the use of patented technology and vendor-specific features creates a significant barrier to competition in this instance. Utilizing equipment from a different manufacturer could introduce risks such as incompatibility with the existing system, the need for additional manufacturer-specific training, and potential increases in system downtime—all of which would negatively impact mission-critical operations.

Given these factors, the 7th Contracting Squadron will solicit this product as a single source from Monaco Enterprises, Inc., to preserve the system's functionality and integrity. However, the Squadron will continue to monitor the market for similar hardware and software. If compatible and viable alternatives become available, opportunities for a competitive procurement process will be explored to ensure both compatibility and fair competition for future needs. This approach will ensure program managers receive the required system cohesion while maintaining fair and open competition for contractors where feasible.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

Given the proprietary nature of the technology and the unique capabilities of Monaco Enterprises, Inc. (MEI), the 7th Contracting Squadron will solicit this product as a single source from MEI for the proposed equipment movement and installation of all Monaco equipment from Bldg. 6117 to Bldg. 7232. MEI's proprietary software and hardware are specifically designed to integrate seamlessly with existing systems at Dyess Air Force Base. The use of alternative vendors could introduce significant risks, including potential incompatibility with the current system, the need for additional manufacturer-specific training, and possible system downtime, all of which would adversely affect the base's operational effectiveness.

In the future, the government remains committed to avoiding brand name or single-source awards where possible. The 7th Contracting Squadron will continue to monitor the market for similar hardware and software solutions. If compatible and viable alternatives become available that meet the necessary technical and operational requirements, competitive procurement processes will be explored. The goal is to ensure that future acquisitions are not limited to a single source, while still maintaining the required system functionality, integration, and operational continuity. This will allow the government to provide fair competition opportunities to contractors where feasible, and to pursue acquisition strategies that encourage innovation and provide the best value for the government.

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
