

NASA Statement of Work

Maintenance Contract for the Syft Mass Spectrometer Used for Trace Contaminant Control Monitoring in the ECLSS Development Branch

14 February 2025

MSFC ECLSS Trace Contaminant Control Monitoring

George C. Marshall Space Flight Center
Engineering Directorate, Space Systems Department

INTRODUCTION

Trace contaminant control is a critical life support function in space exploration. ES-62 monitors trace contaminants in testing chambers to evaluate developmental ECLSS hardware. One of the ways trace contaminants are monitored in real-time at low concentrations is with the Syft mass spectrometer. The service contract is critical for maintenance and performance of this mass spectrometer.

PROCUREMENT GOALS AND OBJECTIVES

Goal

The goal of this procurement is to maintain optimal performance and operational availability of the Syft mass spectrometer.

TASKS AND ASSOCIATED COST

This service contract is an all-inclusive support contract to maintain performance and operational availability of the Syft mass spectrometer for trace contaminant control. *The duration of this contract is one year from November 1, 2024 to October 31, 2025.*

Total Cost and Tasks Breakdown. *Total duration 12 months from November 1, 2024 to October 31, 2025.

TASK	DESCRIPTION	DURATION
Task 1	All-inclusive support contract	12-months

SCOPE OF WORK (1-year)

Task 1. Support

- All-inclusive repair of instrument
- Method development consultation

DELIVERABLES (1-year deliverables)

- All-inclusive repair of instrument
- Method development consultation
