

PR Number:

Conserv is a museum datalogger program that can track and record temperature/humidity, pests, and lighting in museum exhibits and storage. The park wishes to purchase 1 gateway and 30 sensors that will go in each exhibit case and in museum storage. The gateway costs [REDACTED] per year and the 30 gateways will cost [REDACTED] per year. This is a subscription-based service for three years and the total amount the park will pay annual comes to [REDACTED]. The park will pay [REDACTED] to account for shipping costs of the system.

Urgent and compelling circumstances exist. Include critical delivery or performance dates, and when you became aware of the requirement. Provide a specific statement of the impact on Government operations, financial or otherwise, if the required delivery or performance dates are not met.

Conserv is the only museum datalogger on the market that can record temperature/humidity, do Integrated Pest Management monitoring, and light readings. Since our Visitor Center lacks service, it has been difficult to find additional loggers that park can use that would allow us to record our data and track more efficiently. Our current dataloggers we use only can track temperature and humidity and due to lack of service, we are not able to use them to their full potential. Other parks in the agency have been using this program and it is IT approved as well as approved by the Museum Management Program.
