

Army Data Platform IDIQ PWS

PERFORMANCE WORK STATEMENT (PWS)

Army Data Platform

PART 1 - BACKGROUND

1. General: This Multiple Award Task Order Contract (MATOC) Indefinite Delivery, Indefinite Quantity (IDIQ) for Army Data Platform (ADP) is designed to provide a vehicle to award Task Orders (TOs) in a streamlined manner in support of United States Army data requirements.

1.1. Description of Services/Introduction: The ADP ecosystem utilizes a multi-platform strategy that provides users with a task order method to provide scalable and integrated data platforms, tools, and professional services. The purpose of this MATOC is to establish a follow-on capability to the current Under Secretary of the Army directed Army Vantage program, providing Enterprise level data platform capabilities and associated platform support services. Professional services to implement data management and analytics tasks on the vendor-provided platforms is not in scope of this MATOC.

ADP directly supports five of the six components of the Business Enterprise Architecture Data to Decision business process and is the platform component of what the Army is beginning to call a "Data Mesh." It is a core component of the Army's efforts to become a Data Centric force and supports the implementation of the Army Digital Transformation Strategy's goal of using data as a strategic asset. The requirement focuses on enterprise level functions; it spans support across the Business Mission Area (BMA) and Warfighting Mission Area (WMA) at the operational level of war and above (i.e., division and higher). Many specifications identify the technical requirements of a data platform such as data ingest and transformation, and the critical aspect of this requirement is ease of use for data analysts to generate new data products for the Army.

1.2. Background: As part of Army modernization, the Army needs to increase the speed and quality of decision at echelon. The right data at the right time is a key enabler for improving decisions. As per the 2018 Under Secretary of the Army (USA) signed and Chief of Staff of the Army (CSA) Directed Needs Statement, the Army requires a data platform to facilitate this goal. Ease of use at echelon is critical to enable citizen analysts and the data democracy to meet the scale and speed necessary for relevance of our today and future Army. The Army's current program that provides this capability is Army Vantage, previously titled the Army Leader Dashboard. Army Data Platform 2.0 replaces this initial capability, refining its scope based on lessons learned from three years of use and maturity of the Army's data community.

The Army Data Platform is part of a larger data ecosystem or Data Mesh. The Data Mesh follows four main principles: Data Ownership by domain; Data as a Product; Data available everywhere, Self-Serve; and Federated Governance. The goal is to provide the right data to the right echelon at the right time. Data will be simplified, authoritative, and fit the decision required. The data is independent of any source system—it is

Army Data Platform IDIQ PWS

integrated as a 'product' ready for a Soldier or civilian to use the VAULTIS criteria (Visible, Accessible, Understandable, Linked, Trusted, Interoperable, and Secure).

This MATOC allows the Army to create a multi-platform collaborative ecosystem utilizing capabilities across a range of industry vendors. The intent is to foster collaboration and innovation among large vendors, smaller vendors, professional services, and specialized data tools. As technology and Army needs change, the Army needs access to a changing suite of capabilities provided as a service. Over time, the vendor base for platforms, tools, and/or services needs to evolve.

The Government will use a task order process to: 1) develop, implement, and operate data platforms, 2) assist with creating, managing, and implementing data products, 3) help control overall costs for the platform and delivery services.

1.3. MATOC Objectives:

1.3.1. Qualify and select vendors able to deliver platform and provide platform support services.

1.3.2. Establish an ecosystem of enterprise data platforms from multiple vendors and service providers that support Army data requirements.

1.3.3. Maximize competition at the task order level by releasing request for task and delivery orders.

1.3.4. Provide to the Army an expedited ordering process for new, emergent platforms that integrate seamlessly into the Army's ecosystem of enterprise data platforms.

1.3.5. Satisfy data product and data consumption requirements for the following types of users:

- Decision Makers
- Data Analysts/Product Generators
- Platform Enablers

2. PART 2 – Platform Objectives

2.1. Overview: The ADP program will provide the Army Enterprise solution for current and future data platforms. This contract will be utilized for the issuance of TOs for ADP. ADP MATOC IDIQ requirements will include platform delivery and support as required to maintain visibility into the vast amount of data contained in numerous databases dispersed across the Army Enterprise. These platforms will enable self-service data domains and data product owners to create, manage, use, and publish data products.

As a component of the Data Mesh, the data platforms provide enterprise compute and store to build, run, and monitor data products. They are the engine for producing data products to meet mission, giving users the ability to create and use conforming data products without needing detailed understanding of the federated mesh governance policies. The data platforms are uniquely suited, as they provide the workspace for working with Army decision makers at echelon to determine what data is needed for decision. They extract, transform, enrich, and present data as needed by the decision maker. The platform then can host the data and provide continuous data pipelines, ensuring the data needed by the decision maker meets the decision makers' latency requirements. Platforms are the strategic enabler for data products and mission.

ADP capabilities will solve the following two broad high-level problems and two broad objective needs:

(1) High-Level Problem Areas

- a) The Army requires the ability to see itself (access all its data).
- b) The Army has an information technology problem of acquiring, aggregating, analyzing, and integrating data that already exists.

(2) High-Level Objective Needs

- a) The Army at echelon needs to be able to operate (with information) at the speed of war.
- b) The Army needs to make a fundamental shift in how leaders at echelon access and use information.

ADP will serve as the innovation engine that develops and refines data products to meet the Army's missions. The following (Table 1) is from the ADP Capabilities Requirements Document (CRD) and highlights high level objective requirements and processes.

HLO	Process Description	To-Be State
User Experience	The solution shall present information in a way that is immediately understandable and actionable for any end	- The decision maker user experience requires an application with drill-down, point and click capabilities to quickly comprehend large-scale data for non-technical users. - The analyst user experience requires an intuitive searchable interface to quickly locate, connect to, and integrate data

Army Data Platform IDIQ PWS

	user. Inclusion of a mobile solution (all form factors) is preferred.	sources to create customized ingests, and automate data/information updates. - Platform enablers require a platform that provides intuitive identification of problems with data extraction, transformation, integration, and export automation. - The user community requires a platform that can be easily adapted to support decision making activities and staff processes for collaboration at echelon.
Data Integration	The solution shall be capable of integrating both current and historical structured and unstructured data sets, perform predictive analytics, and forecasting.	- Capability to acquire data from numerous unclassified and classified authoritative data sources in an automated manner: including automated or manually initiated data “pull” jobs through a Representational State Transfer (RESTful) web API or direct connections. - Data “push” or “subscribe” to other Army systems requiring authoritative, integrated data or support to other joint platforms authoritative data as needed. - Platform which provisions curated and source data sets to other Data Analytic and Software Development environments and provides high quality metadata on source system and data lineage. - Data-agnostic data integration, including structured, unstructured, and semi-structured data integration capabilities at terabyte scale that provides an intuitive interactive solution to assist with data quality ensuring completeness, accuracy, reliability and timeliness, and the ability to automatically generate and curate a searchable catalog of analytic content. - Data protected in accordance with applicable laws, regulations, and policies governing Personally Identifiable Information (PII) and Protected Health Information (PHI).
Analytics and Visualization	The solution shall be interoperable with EDSC and ICAM capabilities, and shall facilitate enterprise data mining and analytics.	- Integrates, analyzes, and visualizes information in real-time/near real-time from multiple disparate data sources—both private and public—with an intuitive, interactive, top-down, and large-scale data exploration application. - Processes and displays all current data and available historic Army authoritative data and provides a solution that enables access through all modern Army approved Army devices, enabling the ability to filter, receive/view alert(s) and share information with other users as well as plaintext search capability.
Security and Infrastructure	The product and/or capability is commercially available now and integrates with Army and or DoD ICAM capabilities.	- Capable of delivering integrated classified and unclassified content to SIPRNet users and enable the Government to pass data and insights from an unclassified solution to a classified solution. - Protects data at rest and in transit using Federal Information Processing Standards and uses Army Identity Management solutions. - Employs role and organizational based access controls that meets or can meet the DOD Risk Management Framework (RMF) accreditation requirements for an Authorization to Operate (ATO) on DOD NIPRNet and SIPRNet. - Enables dynamic scalability of compute for advanced analytics.

Table 1. High Level Objectives

Army Data Platform IDIQ PWS

2.2. Threshold Requirements for All Data Platform Task Orders: The vendor will provide a platform capable of meeting or exceeding the following Threshold Requirements:

2.2.1. Usability

2.2.1.1. Data Operations and Data Workforce– Intuitive, interactive, large-scale data exploration application to allow users to interactively view data ingest status and quality metrics in a drill-down, point-and-click application. Presents a broad and immediate awareness of source data and data products in the platform. Presents information that is immediately understandable and actionable to users. Provides user defined alert(s) and ability to setup and tailor an alert banner.

2.2.2. Data Integration

2.2.2.1. Data ingest jobs through a Representational State Transfer (RESTful) web API or direct connections that refresh data and can be run manually or on a schedule. Data egress to or subscriptions by other Army systems requiring authoritative, integrated data or to provide other authorized platforms authoritative data as needed.

2.2.2.2. Data management solution that acquires data from numerous unclassified authoritative data sources in an automated manner that minimizes or eliminates the requirement for manual intervention during data acquisition and enables information management.

2.2.2.3. Data-agnostic data integration, including structured, unstructured, and semi-structured data integration capabilities at terabyte scale.

2.2.2.4. Provide an Enterprise Data Platform that can produce and share data products with other Data Analytic and Software Development environments.

2.2.2.5. Provide an intuitive interactive solution to assist with data quality ensuring completeness, accuracy, reliability, and timeliness.

2.2.2.6. Provide metadata on source system and data lineage to assist automated input to the Army Data Catalog.

2.2.2.7. Provide the ability to automatically generate status of data production and usage.

2.2.3. Security and Infrastructure

2.2.3.1. Enables dynamic scalability of compute for advanced analytics.

2.2.3.2. Use Army Approved Identity Management solutions.

2.2.3.3. Always provide data confidentiality using only approved algorithms (e.g., Federal Information Processing Standards (FIPS) 140-2).

Army Data Platform IDIQ PWS

135 2.2.3.4. Role based access controls, assignable to individual users or groups of users
136 and are securely stored in lists, which can be updated at any time.

137 2.2.3.5. Provide the capability for Digital Loss Protection at the individual file level
138 utilizing vendor agnostic data loss prevention tools.

139 2.2.3.6. Must achieve authority to operation on NIPRNET using the DoD Risk
140 Management Framework (RMF). (DoD Risk Management Framework (RMF) Package
141 Deliverables, DI-MGMT-82001).

142 2.2.4. Audit Capability. Ability to audit data products at the data analyst/product
143 generators and decision maker level to validate the product being utilized for decision
144 making.

145 2.2.4.1. Ability to track origin, processing, and transformation of data products, including
146 data sources, transformations, and calculations applied.

147 2.2.4.2. Ability to record and track changes to data products, including who made the
148 changes, when, and why.

149 2.2.4.3. Ability to maintain a tamper-proof record of all system activities, including data
150 access, modifications, and deletions.

151 2.2.4.4. Ability to verify the accuracy, completeness, and consistency of data products
152 against defined rules and standards.

153 2.2.5. Key System Attributes

154 2.2.5.1. Ability to export/import/reuse current hosted data along with open-source code
155 (e.g., R, Python, SQL) used to develop/build logic for data transformation/curation.

156 2.2.5.2. Ability to scale to Army needs as determined by Government requirements with
157 an initial reference to be able to manage at a minimum of 40,000 named user accounts.

158 2.2.5.3. Tier 3 support help desk to support advanced troubleshooting and resolution of
159 complex technical issues support and documentation on functionality.

160 2.2.5.4. Synchronize with Army Data Catalogue for data lifecycle management
161 functions.

162 2.2.5.5. Automated tracking, monitoring, and documentation of its resource utilization,
163 including compute, storage, processing, and network usage, to support real-time
164 visibility and optimization of resource allocation.

165 2.3. Extendable Threshold Requirements that are Data Platform Task Order 166 Specific

167 2.3.1. User Experience

Army Data Platform IDIQ PWS

2.3.1.1. Decision Makers – Intuitive, interactive, top-down, large-scale data exploration application to allow nontechnical users to interactively explore massive-scale data in a drill-down, point-and-click application. Presents a broad and immediate awareness of actual or predicted Army status. Presents information that is immediately understandable and actionable to users. Provides user defined alert(s) and ability to setup and tailor an alert banner.

2.3.1.2. Data Analysts/Product Generators – Provides an intuitive searchable interface for consumers to quickly locate and connect to data sources for use in other applications. Ability to conduct self-service analytics at scale; ingest, integrate, curate, analyze, and visualize in individual and group workspaces, providing a robust set of tools that enable collaboration such as version control. Ease of use of the data platform is critical to lower barriers of entry and increase velocity of change in the Army.

2.3.1.3. Platform Enablers – Provide status of data within the platform. Provides intuitive identification of problems with data extraction, transformation, integration, and export automation. Provides easy to use platform controls, to include user access, store/compute utilization, optimization tools based on usage rates.

2.3.2. Classified Data Integration Capability

2.3.2.1. Requirements identical to PWS 2.2.2 (1) - (7), Data Integration, but to include classified capabilities on the SIPRNet.

2.3.2.2. Must achieve authority to operation on SIPRNET using the DoD Risk Management Framework (RMF). (DoD Risk Management Framework (RMF) Package Deliverables, DI-MGMT-82001).

2.3.2.3. Organize and integrate data on NIPRNet into a SIPRNET-hosted solution.

2.3.2.4. Capable of delivering integrated classified and unclassified content to SIPRNet users and enable the Government to pass data and insights from an unclassified solution to a classified solution.

2.3.3. Protected Unclassified Data Integration Capability

2.3.3.1. Requirements identical to PWS 2.2.2 (1) - (7), Data Integration, but to include unclassified data management that protects data in accordance with applicable laws, regulations, and policies governing Personally Identifiable Information (PII) and Protected Health Information (PHI).

2.3.4. Analytics and Visualization

2.3.4.1. Integrates, analyzes, and visualizes information in real-time/near real-time (within 24 hours of data updates) from multiple disparate data sources, both private and public.

Army Data Platform IDIQ PWS

2.3.4.2. Intuitive, interactive, top-down, large-scale data exploration application to allow nontechnical users to interactively explore massive-scale data in a drill-down, point-and-click application and filter billions of pieces of data into a digestible set of useful information.

2.3.4.3. Processes and displays all current data and available historical Army data as needed to provide future predictive analytics for time frames required at echelon (Division and higher). Additionally, recommend the capability provide “confidence levels” with predictions to fully inform Decision Makers as to utility and risks associated with the predictions.

2.3.4.4. Provides a solution that enables access and/or launches access through all modern Army approved (classified and unclassified) Army devices (desktop, laptop, tablet, and mobile).

2.3.4.5. Provides ability to filter, receive/view alert(s), and share information with other users.

2.3.4.6. Provides plaintext search capability across authoritative data.

2.3.5. Key System Attributes

2.3.5.1. Provide training content in a self-paced, online format, accessible from within the platform, tailored to various types of platform users.

2.3.5.2. Transition Requirements. The data, data workflow, and display logic in the current platform must be transferred to any new platform. This includes:

2.3.5.2.1. ETL logic and curated data.

2.3.5.2.2. Linkages to data sources at the current frequency and capacity.

2.3.5.2.3. Support the current user and analytic workload.

2.3.5.2.4. Display graphics and dashboard user experience.

2.4. Objective Requirements

2.4.1. Integrate Artificial Intelligence (AI)/Machine Learning (ML), Robotic Process Automation (RPA), and other analytic capabilities directly within the platform.

2.4.2. Provide an “agility” layer to transactional systems: once a decision is identified in the data analytics platform, provide the ability to transmit transaction requests back to a transactional system based upon that decision utilizing cross platform identity management and permissions and is compliant with IT Audit General Controls.

2.4.3. Provide the ability to prioritize computational and data exchange activities. In a Disrupted, Intermittent, and Low/Limited-Bandwidth (DIL) environment, network and

Army Data Platform IDIQ PWS

computational abilities will be stressed. Based on operational need, data activities (e.g., Existing Extract, Transform, Load (ETL)s, data export, data ingest) that task limited resources (e.g., compute and network throughput), need to be able to be prioritized by the user to enable priority missions.

2.5 Environment: Data platforms shall operate at Impact Levels (IL) 4/5 and 6 and conform to one of these three conditions:

(1) SaaS offerings that are FEDRAMP and DISA PA authorized.

(2) SaaS offerings with sponsorship and the ability to meet DISA PA requirements may be considered based on mission need.

(3) PaaS and SaaS offerings deployed in cARMY.

2.5.1 The platforms shall be able to deliver security and incident logs to the Army in an automated fashion.

2.5.2 The platforms shall interoperate with enterprise services such as Identity Credential and Access Management (ICAM), Army Data Catalog, and share data and objects with other data platforms through an API management layer.

2.5.3 All data platforms within the ADP ecosystem must be able to interoperate with each other, and they will support connectivity to third party data analytics and visualization tools.

2.6 Delivery Model: Vendors shall deliver platforms through innovative, iterative, and customer-centric development. The vendors shall leverage modern, agile delivery practices that are tailored to the needs of the mission. The vendors shall demonstrate how they integrate agile best practices into their workflows and provide agile metrics to assess performance using their choice of tools and methodologies.

2.7 Training and Documentation: The vendor shall develop and deliver training materials to meet the needs of platform users. Training material shall consist of, but not limited to – onboarding material, user training, skill assessments, refresher training, and support training. Furthermore, the vendors shall maintain a comprehensive list of artifacts to include, but not limited to, user manuals, technical manuals, administrative / configuration documents, process workflows, support documentation (contact information, SLA's, escalation paths and ticketing) and specifications, and operational and troubleshooting procedures.

2.8 Capability Support: Following delivery of an enterprise data platform solution, the vendor shall provide post-deployment support and maintenance services, including bug fixes, performance tuning, and updates. System performance will be monitored to include addressing any issues that arise and offering ongoing technical support, helpdesk services, and training support. Technical support and helpdesk services will include hours of availability, responses time by priority level, escalation methods, and technical support and help desk responsibilities. Additional details will be provided in future task orders.

Army Data Platform IDIQ PWS

2.9 Service Contract Reporting: System for Award Management (SAM) Service Contract Report (SCR): The vendor shall report ALL vendor labor hours (including subcontractor labor hours) required for performance of services provided under this contract for the Army via a secure data collection site. The vendor shall completely fill in all required data fields through the following web address: www.sam.gov. Reporting inputs will be for the labor executed during the PoP during each Government Fiscal Year (FY), which runs from October 1 through September 30. While inputs may be reported any time during the FY, all data will be reported no later than October 31 of each calendar year. Vendors may direct questions to the help desk by clicking "View Assistance for SAM.gov" which is located at the top of the SAM.gov website. From there, you can select "Contact Our Service Desk" which will allow you to contact SAM.gov directly. If contract PoP ends prior to September 30, the vendor has twenty (20) days from end date of the contract to complete the SAM SCR requirement.

Steps for Submitting a SCR:

1. Go to www.sam.gov and log in.
2. Select Entity Registrations and then select Service Contract Reporting.
3. SAM displays your entities which have service contracts and meet the reporting criteria. Select View by entity to see the service contracts for each entity.
4. Next, select Add for the service contract against which you want to create a SCR.
5. Each service contract which meets the FAR Subpart 4.1703 reporting thresholds is displayed. You will be taken to the Complete SCR page. SAM displays the contract details and allows you to report. You are required to enter the following information:
6. Total Amount Invoiced: Total dollar amount invoiced for services performed during the previous Government fiscal year under the contract (this amount should include the prime and any subcontract amount) (? No b) paragraph)

Prime Contractor Hours Expended: Prime vendor direct labor hours expended on the services performed during the previous Government FY. The amount you enter is automatically divided by 2,080 hours to calculate a Full Time Employee (FTE) equivalent, displayed under the Prime Contractor Hours Expended as Prime Contractor FTEs.

- Report any required Tier 1 subcontractor information by selecting the Add Tier 1 Subcontract Information button.
- When you are ready to submit the report, select Submit. This saves your report and returns you to the Select Service Contract page where you can create other SCRs or edit an existing SCR.

Steps for Editing a Submitted Report:

- Follow steps 1-4 above. Any previously submitted SCR will have a View/Edit button instead of an Add button.
- Select View/Edit. You will be able to view the current SCR, edit available fields, and resubmit the record. You can also delete previously entered information altogether.

Army Data Platform IDIQ PWS

Standard: All information provided by the vendor will be accurate, complete, and not exceed suspense dates noted in corresponding paragraph above.

Acceptable Quality Limit: 100% Compliant

2.10 Vendor Key Personnel: Each MATOC Contract Holder shall identify personnel to serve in the following roles at that MATOC level. The Government will not separately pay for these positions. No costs for Vendor Key Personnel shall be billed to the ADP program. Key personnel at the MATOC contract level will serve as the primary points of communication throughout the ordering period. Contract Holders may fill key personnel positions however they see appropriate provided that the individual(s) filling those positions are empowered to speak on behalf of the company. The following positions are identified as key personnel at the Base MATOC Contract level.

Contractor Contract Manager (CCM): Contractor Representative responsible for negotiating contractual matters on behalf of the ADP MATOC Contract Holder.

MATOC PCO has current point-of-contact information for the Contractor Key Personnel positions. In the event of a change to Contractor Key Personnel, the Contractor shall notify the MATOC PCO and provide all Point of Contact information for the new Key Personnel within five (5) calendar days of the change.

The Contractor shall ensure that the MATOC PCO has current point-of-contact information for the Contractor Key Personnel positions. In the event of a change to Contractor Key Personnel, the Contractor shall notify the MATOC PCO and provide all Point of Contact information for the new Key Personnel within five (5) calendar days of the change. Failure of Contractor Key Personnel to perform their duties effectively and efficiently will be construed as conduct detrimental to contract performance and may result in Off-Ramping.

2.11 Program Management: The vendor shall provide program management support for managing ADP TOs as needed. Supporting tasks include:

- The vendor shall support regular coordination between MATOC award holders on related projects.
- The vendor shall provide periodic TO status updates as required by the Government within an agreed-upon frequency and schedule.
- The vendor shall respond to cybersecurity incidents in accordance with the requirements of the TO.
- The vendor shall provide program management documentation as required by the Government to support TO project deliverables.
- The vendor shall provide transition-in/transition-out activities to facilitate a smooth transition at TO start and completion.

PART 3 – General Information

3. General Information:

3.0. Quality Assurance: Vendor performance under resulting TOs will be surveilled by the Government in accordance with the requirements of the Performance Work Statement (PWS), Contract Data Requirements Lists (CDRLs), Quality Assurance document and TO.

3.1. Recognized Holidays: The following provides information on recognized holidays for the purpose of this PWS. If submittal of any documentation (e.g., deliverables, submittals, etc.) deadline fall on a holiday, the closest workday prior to the holiday will apply as the deadline for submittal. The Government recognizes the following holidays listed below. The vendor will not be required to work on Federal Holidays:

- New Year's Day
- Martin Luther King Jr.'s Birthday
- President's Day (George Washington's Birthday)
- Memorial Day
- Juneteenth National Independence Day
- Independence Day
- Labor Day
- Columbus Day
- Veteran's Day
- Thanksgiving Day
- Christmas Day

3.2. Place of Performance: The place of performance will be defined at the TO level. The Government contemplates that the primary place of performance across all TOs will be the Contractor's facility. Mission requirements of certain TOs may require performance at the Government's facility. Remote work may be authorized to the extent that mission requirements and vendor policies permit.

3.3. Hours of Operations: The hours of operation will be defined in the TOs.

3.4. Security Requirements: The following information is provided on security related matters. These requirements reflect the minimum requirements for the TO and further requirements regarding security will be defined within individual TOs.

3.5. Security Program: If the TO states work occurs in a classified environment, then vendor personnel performing work under this TO must be eligible or have a *SECRET clearance* at time of the proposal submission and must maintain the level of security required for the life of any TO awarded under the MATOC IDIQ. The security requirements are IAW with the DoD Contract Security Classification Specification (DD Form 254).

3.6. Personnel Security Clearance Requirements: If the TO states work is in a classified environment, then vendor personnel performing work must have an active

Army Data Platform IDIQ PWS

personnel security clearance at the *SECRET* level in the Defense Information System for Security (DISS) at time of the proposal submission or for new hires within 30 days of TO award, and they must maintain the level of security required for the life of the contract. The security requirements are IAW the DoD Contract Security Classification Specification (DD Form 254). The vendor will ensure that employees and subcontractor employees performing services comply with FAR 52.204-2 Security Requirements when the employee has access to information classified "Confidential," "Secret," or "Top Secret." The vendor will ensure the employee complies with the DoD Security Agreement (DD Form 441), and the NISPOM rule at 32 Code of Federal Regulation (CFR) Part 117, effective 24 Feb 2021. The NISPOM is the National Industrial Security Program Operating Manual to which contractors must implement and comply.

3.7. Installation Access: If the TO states that work requires access to U.S. Government installations, buildings and controlled areas, personnel must meet authorization and security criteria. Failure to submit required information/data and obtain required documentation or clearances will be grounds for denying access to U.S. installations, buildings, and controlled areas. The vendor will ensure that any subcontractors comply with these requirements and that all employees, of both the vendor and any subcontractor utilized by the vendor, are made aware of and comply with these requirements. The vendor will be aware of and comply with the requirements associated with Installation Access Control. The Government is not liable for any costs associated with performance delays due solely to a firm's failure to comply with Installation Access Control System (IACS) processing requirements. The vendor will return installation passes to the issuing IACS office when a contract's Period of Performance (PoP) ends or when a contractor employee no longer requires access.

3.8. Individual Termination or Expiration of Employment: The vendor will collect the installation access passes and Government credentials and, if applicable, Government Furnished Property (GFP) the same day employment of an individual has expired or has been terminated and will return them to the issuing office within one (1) to five (5) business days.

3.8.1. Contract Termination or Cancellation: Upon termination or cancellation of a TO, the vendor will collect all outstanding installation access passes and return them to the issuing office within ten (10) days.

3.8.2. Common Access Cards (CAC) and CAC Log: The vendor will provide the following information: Last, First and Middle Name, Social Security Number, date of birth, primary email address (this email address will be used to contact the individual) and any other necessary information required to obtain a CAC or installation access card, to the Contracting Officer's Representative (COR) via email within five (5) days after award. The contractor will not be issued a CAC if their time on this effort is less than 50%. If the contractor possesses a non-Army CAC from another contract effort, the contractor must surrender that CAC before an Army CAC will be issued for an ADP contract effort.

Army Data Platform IDIQ PWS

3.9. Background Checks: Applicable to Continental United States (CONUS) and Outside Continental United States (OCONUS) (includes Alaska and Hawaii) requirements, the Requiring Activity (RA) will consult with the responsible Security Office and Activity Manager applicable to location(s) associated with this PWS and identify the level of background check required, supported by the applicable regulation(s).

3.9.1. U.S. Citizen: The RA Manager will determine the extent of background checks required. The vendor employee may begin performance on a contract after receiving a favorable local background check. The vendor agrees to replace the employee should the results of the background check, if required, be unfavorable as determined by the RA Manager. The vendor's replacement of the employee with the unfavorable background check will be within a timeframe provided by the RA Manager. The vendor will also replace employees whose background check, during their tenure of employment, renders them with an unfavorable local or stateside background check, as determined by the RA Manager. The vendor will forward a copy to the Contracting Officer (KO) via the COR and the RA Manager of each favorable background check within five (5) days of receipt by the vendor, identifying such with the appropriate contract number. The Contractor will forward a copy to the KO via the COR and the RA Manager of each unfavorable background check within two (2) days of receipt by the vendor, identifying such with the appropriate contract number. When the Government awards a non-personal services contract directly to an individual, the failure of the individual to provide a favorable background check is grounds for termination.

3.10. Physical Security: The vendor will safeguard all Government equipment, information, and property provided for vendor use. If performing work in a Government facility, the facilities, equipment, and materials will be secured at the close of each work period IAW the Army Physical Security Program (AR 190-13).

3.11. Operations Security (OPSEC) Requirements: vendor personnel will adhere to facility security policies and restrictions. The vendor will immediately report suspicious activities to security personnel.

3.12. Personally Identifiable Information (PII): vendor personnel will adhere to Privacy Act of 1974, DoD Instruction 8500.2 and complete DoD Cyber Exchange training. Any breach of PII will be reported within (1) one hour to US-CERT at <http://www.us-cert.gov>.

3.13. Security Incidents and Violations: The vendor will notify the Government Contracting Activity and the Government Security Manager within 48 hours of any incident involving the actual or suspected compromise/loss of classified information to enable the Government to conduct immediate assessments of potential impact pending formal inquiry/investigation. Actual or suspected compromise of Covered Defense Information will be reported IAW DFARS Clause 252.204-7012.

3.14. Key Control: vendor will establish and implement methods of making sure all keys and/or CAC cards issued to the vendor by the Government are not lost or

Army Data Platform IDIQ PWS

misplaced and are not used by unauthorized persons. NOTE: All references to keys include CAC and key cards. No keys issued to the vendor by the Government will be duplicated. The vendor will develop procedures covering key control that will be included in the vendor's Security Plan with CDRL DI-ADMIN-81373 and the Quality Control Plan (QCP). Such procedures will include turn-in of any issued keys by personnel who no longer require access to locked areas. The vendor will immediately report any incidents of lost or duplicate keys to the KO. The vendor will prohibit the use of Government issued keys and/or CAC cards by any persons other than the vendor's employees. The vendor will prohibit the opening of locked areas by vendor employees to permit entrance of persons other than vendor employees engaged in the performance of assigned work in those areas, or personnel authorized entrance by the KO. The vendor will establish and implement methods of ensuring that all lock combinations are not revealed to unauthorized persons. The vendor will ensure that lock combinations are changed when personnel having access to the combinations no longer have a need to know such combinations. These procedures will be included in the QCP (DI-ADMN-81373), CDRL 002- Operations Security Plan.

3.15. Post Award Conference/Periodic Progress Meetings: The vendor will attend any post award conference convened by the contracting activity or contract administration office IAW FAR Subpart 42.5. The KO, COR, and other Government personnel may meet periodically with the vendor to review the vendor's performance. At these meetings the KO will apprise the vendor of how the Government views the vendor's performance, and the vendor will apprise the Government of problems, if any, being experienced. Appropriate action will be taken to resolve outstanding issues. These meetings will be at no additional cost to the Government (DI-ADMN-81505), CDRL-001 Integrated Program Management Data and Analysis Report.

3.15.1. The vendor will attend, participate in, and furnish input to scheduled and unscheduled meetings, conferences, and briefings that relate to the functions and services herein as required by the Government to provide effective communication and impart necessary information. The Contract Manager or designated representative will attend meetings as requested by the Government. Meeting attendees will at times include vendor managerial, supervisory, and other personnel knowledgeable of the subject matter. Meetings may start or end outside of regular duty hours.

3.16. Contracting Officer's Representative (COR): Refer to Part 6 of this PWS for the definition of a COR. As determined by the KO, a COR will be appointed at the TO level and identified by letter of designation, a copy of which will be provided to the vendor by the KO. The designation letter states the responsibilities and limitations of the COR. The COR is not authorized to change any of the terms and conditions of the resulting order. The COR monitors all technical aspects of the contract and assists in contract administration. The COR is not authorized to obligate the Government. If the work is not written/modified into the contract, the COR is not authorized to request new work. The COR will have oversight of the following functions (but not limited to): ensuring that the vendor performs the technical requirements of the contract; performing inspections necessary in connection with contract performance; maintaining written and oral communications with the vendor concerning technical

Army Data Platform IDIQ PWS

aspects of the contract; issue written interpretations of technical requirements, including Government drawings, designs, and specifications; monitoring Contractor's performance and notifying both the KO and vendor of any deficiencies; coordinating availability of Government property; and coordinating site entry of vendor personnel.

3.17. Identification of Contractor Employees: All vendor personnel attending meetings, answering Government telephones, and working in other situations where their contractor status is not obvious to third parties must identify themselves, to include proper marking of signature blocks in correspondence, to avoid creating an impression in the minds of members of the public that they are Government officials. The vendor will ensure that all documents or report, produced by contractors are suitably marked as contractor products or that contractor participation is appropriately disclosed.

3.18. Contractor Travel: The vendor may be required to travel to an alternate place of business, CONUS or OCONUS, to attend meetings, conferences, or support mission requirements. The vendor may be authorized travel expenses at rates no higher than the substantive provisions of the Federal Travel Regulation (FTR), IAW FAR Part 31.205-46, and the limitation of funds specified in this contract. All travel requires Government approval and authorization within ten (10) days prior to scheduled travel, (DI-ADMN-81308A).

3.19. Other Direct Costs (ODCs): If a vendor verifies that they have an Approved Purchasing System, the U.S. Government may recommend a threshold for the COR to approve. Above that approval threshold, KO concurrence is required. An approved purchasing system means a vendor's purchasing system has been reviewed and approved IAW FAR Part 44. For charges to be invoiced, deliverable services must have been performed in direct support of a requirement. The Government does not have an employer/employee relationship with vendor employees and therefore is not authorized to grant administrative leave or expend Government resources to compensate vendor employees for hours expended on activities not within scope of the TO. Under these circumstances, vendor employees must comply with individual company policy that is IAW that company's compensation system. Submission of an invoice for payment of non-billable charges are not authorized and constitutes a false claim, which may lead to criminal sanctions, fines, suspension, or debarment.

3.20. Data Rights: The Government has unlimited rights to all documents, materials, and data produced under this contract. All documents, materials, data, source code of software, or any source code, software, or transforms generated by the system or through a low-code/no-code solution, hereafter referred to as "materials", produced under this contract will be Government owned and are the property of the Government with all rights and privileges of ownership and copyright belonging exclusively to the Government. These materials may not be used or sold by the vendor without written permission from the KO. All materials supplied to the Government will be the sole property of the Government and may not be used for any other purpose. This right does not abrogate any other Government rights.

Army Data Platform IDIQ PWS

3.21. Non-Disclosure Requirements: Performance under this contract may require the vendor to access materials proprietary to a government agency, another Government vendor, or of such nature that its dissemination or use other than as specified in this work statement would be adverse to the interests of the Government or others. The vendor and vendor personnel will not divulge, or release materials developed or obtained under performance of this PWS, except to authorized by Government personnel or upon written approval of the KO. The vendor will not use, disclose, or reproduce proprietary materials other than as specified in this PWS. All documentation showing individual names or other personal information will be controlled and protected under the provisions of the Privacy Act of 1974, Public Law 93-579, 5 United States Code (U.S.C.) Section 552a (TACOM Clause 52.215-4405).

3.22. Protection of Government and Contract Information: Per Public Use Notice of Limitations stated by Defense Imagery Management Operations Center and contained at www.dimoc.mil/resources/limitations/, the vendor will not cite any information (e.g., contract information, pictures, locations, etc.) obtained through this contract on any hard copy or digital marketing tools to include its company website.

3.23. Non-Disclosure Statements: The vendor will provide signed Non-Disclosure Agreements (NDAs) to the COR no later than seven (7) days prior to commencement of work for a TO issued under this contract. Disclosure of information by vendor personnel may result in removal from this contract.

3.24. Organizational Conflict of Interest (OCI): vendor and subcontractor personnel performing work under this contract may receive, have access to or participate in the development of proprietary or source selection information (e.g., cost or pricing information, budget information or analyses, specifications, or work statements, etc.) or perform evaluation services which may create a current or subsequent OCI as defined in FAR Subpart 9.5. The vendor will notify the KO immediately whenever it becomes aware that such access or participation may result in any actual or potential OCI and will promptly submit a plan to the KO to avoid or mitigate any such OCI. The vendor's OCI Mitigation Plan will be determined to be acceptable solely at the discretion of the KO. In the event the KO unilaterally determines that any such OCI cannot be satisfactorily avoided or mitigated, the KO may affect other remedies deemed necessary, including prohibiting the vendor from participation in subsequent contracted requirements which may be affected by the OCI.

3.25. Required Training: The following provides information on training requirements. This is not inclusive to all training requirements for all personnel. Any additional vendor training requirements will be stated in follow on TOs. All vendor employees, including subcontractors, will complete Level I OPSEC 1.23.1 OPSEC Training within one (1) day of employment under this contract. Verification of the training will be provided to the COR within one (1) day after completion of the training. OPSEC Level I training is available at https://jkodirect.jten.mil/html/COI.xhtml?course_prefix=EUC&course_number=-ECJ6-110-N.

Army Data Platform IDIQ PWS

3.25.1. Information Security Program (INFOSEC) Training: If applicable, vendor employees, including subcontractors, will complete INFOSEC training within one (1) day of employment under this contract. Verification of the training will be provided to the COR within one (1) day after completion of the training. INFOSEC training is available at <https://securityawareness.usalearning.gov/>.

3.25.2. Cybersecurity Training:

3.25.3. All vendor employees, including subcontractors, requiring access to Government information systems will complete the DoD Cybersecurity/Cyber Awareness Training prior to CAC issuance. Verification of the training will be provided as part of the CAC request.

3.25.4. All vendor employees, including subcontractors, working Information Technology (IT)/Information Assurance (IA) functions will comply with DoD and Army training requirements per Cybersecurity Training Certification and Workforce Management DoD Directive (DoDD) 8570.01, Cybersecurity Workforce Improvement Program DoD 8570.01-M, and Cybersecurity AR 25-2 within one (1) day of employment. Verification of the training will be provided to the COR within one (1) day after completion of the training. Training is available at <https://public.cyber.mil/training/cyber-awareness-challenge/> .

3.25.5. All vendor employees, including subcontractors, performing services under this contract with access to a government information system must be registered in the Army Training Certification Tracking System (ATCTS). vendor personnel must complete refresher training every twelve (12) months. Verification of the training will be provided to the COR within fifteen (15) days prior to expiration of current training.

3.26. Government Furnished Property (GFP) and Services: If GFP is required, then refer to Part 2 of this PWS For all issued GFP for this PWS, the vendor will submit a Property Management Plan to the KO and the Property Administrator via the COR within ten (10) days after date of contract award (DI-MISC-80508B).

PART 4 - GOVERNMENT PROPERTY (GP) AND SERVICES

4. Services: The Government will provide the vendor with the following items required to perform work described in this PWS.

4.1. Facilities: The Government will provide the vendor access to workspace needed as determined by the vendor to provide support outlined in this PWS. This includes desks, telephones, computers, and other items that constitute an office environment. The COR will maintain serial number accountability for all equipment issued to contract personnel. The vendor will use reasonable care to avoid damaging existing buildings, equipment, and vegetation on the Government installation. If the vendor's failure to use reasonable care causes damage to any of this property, the vendor will replace or repair the damage at no expense to the Government as the KO directs. If the vendor fails or refuses to make such repair or replacement, the vendor will be liable for the cost, which may be deducted from the contract price.

4.2. Utilities: The Government will provide utilities within Government facilities for the vendors use in performance of duties outlined in this PWS. The vendor will instruct employees in utilities conservation practices. The vendor will operate under conditions that preclude the waste of utilities, which include turning off the water faucets or valves, light switches, etc. after using the required amount to accomplish tasks requiring the use of the utilities.

4.3. Equipment: The Government will provide the vendor with access to a government facility, if needed as determined by the vendor COR, and use of office equipment needed to perform the services when described in this PWS. Examples of equipment include scanners, fax machines, printers, lights, chairs, desks, computers, and office supplies needed to perform assigned work. When the Government determines a personal digital assistant (e.g., mobile phone) is required to perform the requirements of the contract, one will be provided by the Government. The vendor will safeguard any such issued equipment and be responsible for replacement should the equipment be lost or damaged due to negligence on the part of contractor personnel.

4.4. Materials: The Government will provide the vendor with the following materials and information: Organizational Standard Operating Procedures (SOPs), administrative policies and procedures (including document templates), and security policies and procedures. The vendor will return to the Government all Government Furnished Equipment (GFE)/Material (M)/Information (I), furnished to the vendor for performance of this TO at the end of the TO PoP IAW FAR 52.245-1. The vendor will not assume that additional GFE/M/I, not included in this PWS, will be provided by the Government.

4.5. Common Access Cards (CAC): The Government will assist the vendor with obtaining CACs via the Trusted Associate Sponsorship System (TASS) (Website - <https://www.cac.mil/common-access-card/getting-your-cac/for-contractors/>)

PART 5 - CONTRACTOR FURNISHED ITEMS AND SERVICES

Contractor Furnished Property and Services

5. General: The vendor will furnish all supplies, equipment, facilities, and services required to perform work.

5.1. Secret Facility Clearance: When work requested is at Secret and above, the requirement will be stipulated at the TO level. vendor will possess and maintain a Secret facility clearance from the Defense Counterintelligence and Security Agency IAW DoD 5220.22-M; NISPOM and AR 380-49, Industrial Security Program. The vendor's employees performing work in support of this contract will have been granted a Secret clearance from the Defense Industrial Security Clearance Office. The Facility Security Clearance must match the highest security clearance required for personnel. The DoD Contract Security Classification Specification (DD 254) is provided as an attachment in the basic contract.

Part 6 - Definitions and Acronyms

6. Definitions and Acronyms

6.1. Definitions: Although not inclusive of every term used within this PWS, the following provides a list of definitions used throughout this PWS and commonly used in the acquisition field.

Contracting Officer (KO) – means a person with the authority to enter, administer, and/or terminate contracts and make related Determinations and Findings (D&F) on behalf of the Government. Note: The only individual who can legally bind the Government.

Contracting Officer's Representative (COR) – as defined in DFARS 202.101, means an individual designated and authorized in writing by the KO to perform specific technical or administrative functions. DoD Instruction (DoDI) 5000.72, Part II Definitions states the following when defining a COR: “Defined in subpart 202.101 of Reference (f). Any individual delegated responsibilities pursuant to subpart 1.602-2 of Reference (e), regardless of local terminology, must be certified IAW this instruction. For example, local terminology can be COR, KO's technical representative, technical point of contact (POC), technical representative, alternate COR, administrative COR, assistant COR, line-item manager, task order manager, quality assurance personnel, quality assurance evaluator, or COR management.” In addition, Army Regulation 70-13, Chapter 2, paragraph 2-2g, states, in part, the following when providing other surveillance support personnel to assist the COR when needed, “...These other surveillance support personnel may serve as on-site representatives of the COR in performance of actual contract surveillance if they meet all COR requirements and have been appointed by the KO as alternate CORs.”

Contractor (Vendor) – means a supplier or vendor awarded a contract to provide specific supplies or services to the Government. The term used in this contract refers to the prime.

Contractor-acquired Property - means property acquired, fabricated, or otherwise provided by the Contractor for performing a contract and to which the Government has title.

Day – means business day.

Defective Service – means a service output that does not meet the standard of performance associated with the PWS.

Deliverable – means anything that can be physically or electronically delivered but may include non-manufactured things such as meeting minutes or reports.

Army Data Platform IDIQ PWS

Government-Furnished Property (GFP) – as reflected in FAR 52.245-1, GFP “means property in the possession of, or directly acquired by, the Government and subsequently furnished to the Contractor for performance of a contract”. GFP includes, but is not limited to, spares and property furnished for repair, maintenance, overhaul, or modification. It also includes contractor-acquired property if the contractor-acquired property is a deliverable under a cost contract when accepted by the Government for continued use under the contract.

Government Property – means all property owned or leased by the Government as stipulated by FAR Part 45 and DFAR 252.245-7005 Management and Reporting of Government Property. Government property includes both Government-furnished and Contractor-acquired property. Government property includes material, equipment, special tooling, special test equipment, and real property. Government property does not include intellectual property and software.

High Level Objective (HLO) – means a key overarching result-based objective for a project necessary to achieve the project’s vision. HLOs are similar to Level 2 in a Work Breakdown Structure. Each HLO may contain several statements to flesh out the areas necessary to meet the objective.

Platform as a Service (PaaS) – As defined in NIST SP 800-145, “The capability provided to the consumer is to deploy onto the cloud infrastructure consumer-created or acquired applications created using programming languages, libraries, services, and tools supported by the provider. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, or storage, but has control over the deployed applications and possibly configuration settings for the application-hosting environment.”

Physical Security – means that part of security concerned with physical measures designed to safeguard personnel, prevent unauthorized access to equipment, installations, material, and documents, and safeguard against espionage, sabotage, damage, and theft.

Property Administrator - means an authorized representative of the KO appointed IAW agency procedures responsible for administering the contract requirements and obligations relating to Government property in the possession of a Contractor.

Quality Assurance – (or Government contract quality assurance) means the various functions, including inspection, performed by the Government to determine whether a Contractor has fulfilled the contract obligations pertaining to quality and quantity.

Quality Assurance Surveillance Plan (QASP) – means the key Government-developed surveillance process document and is applied to Performance-Based Service Contracting (PBSC). The QASP is used for managing Contractor performance

Army Data Platform IDIQ PWS

assessment by ensuring that systematic quality assurance methods validate that Contractor quality control efforts are timely, effective, and are delivering the results specified in the contract or task order. The QASP directly corresponds to the performance objectives and standards (i.e., quality, quantity, timeliness) specified in the PWS. It provides specific details on how the Government will survey, observe, test, sample, evaluate, and document Contractor performance results to determine if the Contractor has met the required standards for each objective in the PWS. The QASP, with very few if any exceptions, is an internal Government document.

Quality Control – means all necessary measures taken by the Contractor to assure that the quality of a product or service will meet contract requirements.

Software as a Service (SaaS) – As defined in NIST SP 800-145, “The capability provided to the consumer is to use the provider’s applications running on a cloud infrastructure. The applications are accessible from various client devices through either a thin client interface, such as a web browser (e.g., web-based email), or a program interface. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, storage, or even individual application capabilities, except for limited user-specific application configuration settings.”

Statement – means the specific results-based activities required to satisfy HLOs. A statement contains a result, the context of the statement, and the required action(s). Statements focus on “what” is to be accomplished; however, they are not prescriptive in describing “how” the outcome is to be achieved. Each HLO may have several statements to flesh out the areas necessary to meet the objective. Statements are similar to Level 3 in a Work Breakdown Structure.

Subcontractor – means one that enters into a contract with a prime Contractor. The Government does not have privity of contract with the subcontractor.

Workday - the number of hours per day the Contractor provides services IAW the contract.

Work Week - Monday through Friday, unless otherwise specified.

6.2. Acronyms: Although not inclusive of every term used within this PWS, or that may be included in an acquisition, the following provides a list of acronyms commonly used in the acquisition field.

ACOR	Alternate Contracting Officer's Representative
AFARS	Army Federal Acquisition Regulation Supplement
AOR	Area of Responsibility
AR	Army Regulation
AT	Anti-terrorism
ATCTS	Army Training Certification Tracking System

Army Data Platform IDIQ PWS

CAC	Common Access Card
CCE	Contracting Center of Excellence
CDRL	Contract Data Requirements List
CFR	Code of Federal Regulations
CONUS	Continental United States (excludes Alaska and Hawaii)
COR	Contracting Officer's Representative
CRD	Capability Requirements Document
DA	Department of the Army
DD250	Department of Defense Form 250 (Receiving Report)
DD254	Department of Defense Contract Security Classification Specification
DFARS	Defense Federal Acquisition Regulation Supplement
DMDC	Defense Manpower Data Center
DoD	Department of Defense
FAR	Federal Acquisition Regulation
GFP	Government Furnished Property
HLO	High Level Objective
HIPAA	Health Insurance Portability and Accountability Act of 1996
IA	Information Awareness
IAC	Installation Access Control
IACO	Installation Access Control Office
ID	Identification
IDIQ	Indefinite Delivery, Indefinite Quantity
IGCE	Independent Government Cost Estimate
IT	Information Technology
JTR	Joint Travel Regulation
JPAS	Joint Personnel Adjudication System
KO	Contracting Officer
Vendor	Contractor
MATOC	Multiple Award Task Order Contract
OCI	Organizational Conflict of Interest
OCONUS	Outside Continental United States (includes Alaska and Hawaii)
ODC	Other Direct Costs
OPSEC	Operations Security
PII	Personally Identifiable Information
PIPO	Phase In/Phase Out
POC	Point of Contact
PRS	Performance Requirements Summary
PWS	Performance Work Statement
QA	Quality Assurance
QAP	Quality Assurance Program
QASP	Quality Assurance Surveillance Plan
QC	Quality Control
QCP	Quality Control Program
RA	Requiring Activity
RCO	Regional Contracting Office
