MR. ROBERT CARPENTER

Director of Security,
Defense Intelligence Agency

STRATEGIC MESSAGE

The Office of Security (SEC) underpins DIA's ability to deliver a strategic advantage by protecting its assets, managing risks, detecting and responding to threats, and providing a safe and secure environment for the workforce.

- Security professionals also execute a myriad of specialized activities focused on deterring, detecting, and mitigating security risks associated with the storage, processing, and transmission of national security information:
 - Police officers stand watch 24x7 each day at major facilities to safeguard the workforce and national security information by deterring and responding to threats involving intrusions, destruction of property and crime, and responding to workplace life-threatening emergencies as first responders through anti-terrorism/force protection activities including measures such as vulnerability assessments, random security measures, training, and force protection planning.
 - Security professionals thwart the insider threat by identifying and mitigating potential security risks associated with applicants or members of the DIA workforce.
 - The team executes oversight and accreditation of 5,500+ Sensitive Compartmented Information Facilities & Special Access Program facilities; implementation of an Information Security and OPSEC program that safeguards sensitive information and operations from unauthorized access, use, disclosure, modification, or destruction, thereby preventing potential adversaries from exploiting them for their own gain.
