☒ FAR 13.106-1(b)(1)(i) Soliciting from a single source

☐ FAR 13.106-1(b)(1)(ii) Brand name specification

1. NAME OF PROPOSED SOLE SOURCE CONTRACTOR / BRAND NAME MANUFACTURER:

Michigan Scientific Corp., 8500 Ance Road, Charlevoix, MICHIGAN, 49720; CAGE Code 0SVV1

2. BRIEF DESCRIPTION OF SUPPLIES OR SERVICES REQUIRED AND THE INTENDED USE:

The Aberdeen Test Center (ATC) requests the procurement of QTY 2 SW-SR2 Steering Effort Torque and Angle Transducers AND QTY 2 Clamp Sets manufactured by Michigan Scientific Corporation in accordance with the technical specifications outlined in the Purchase Description. The equipment is required to perform critical driver input, handling and stability automotive performance testing on combat and tactical vehicles for safety and performance. The steering effort transducer is used to precisely measure the driver effort and input to the steering system for vehicle response measurements acquired during dynamic operations ATC test courses.

3. UNIQUE SALIENT CHARACTERISTICS THAT LIMIT AVAILABILITY TO ONLY ONE SOURCE, WITH THE REASON NO OTHER SUPPLIES OR SERVICES CAN BE USED:

ATC requires steering effort transducers that meet rigorous specifications and have relevant characteristics to include 1) High torque range, 2) CAN output protocol to a recording system, and 3) Input voltage range of 10-36V.

ATC uses these transducers in Army combat and tactical automotive performance testing. Heavily armored vehicles require more effort to steer the wheels, and the vehicles are expected to be operational in all climates around the world. Michigan Scientific Corporation (MSC) manufactures steering effort transducers which provide the output rate, accuracy and repeatability for test of

4. REASON WHY CONTRACTOR IS THE ONLY SOURCE CAPABLE OF MEETING MISSION REQUIREMENTS; SPECIFICALLY, THE REASON NO OTHER SOURCE CAN MEET THE UNIQUE CAPABILITIES IN SECTION 3:

The Michigan Scientific brand of Steering Wheel Torque and Angle Transducer are proprietary and only available through the Original Equipment Manufacturer (OEM) in the continental U.S. It is the only brand that meets the needs of ATC to perform critical driver input, handling and stability automotive performance testing on combat and tactical

Is this a follow-on contract? yes ☐ no ☒ If yes, provide contract number: _____

7. ACTIONS TO INCREASE COMPETITION (For Contracting Personnel Use):

Market research findings showed that at this time only the OEM (Michigan Scientific Corporation) can provide the SR-SW2 Steering Wheel Torque and Angle Transducer model. This model of equipment is proprietary to Michigan Scientific Corporation and is the only equipment that is capable of meeting this requirement for mission critical automotive testing at ATC. A sole source letter was provided by the OEM to the Contracting Office. As a result of these finding, there is no reasonable expectation of obtaining offers from two or more responsible small business concerns that are competitive in terms of market prices, quality, and delivery to perform this requirement. However, the System of Award Management (SAM) indicates that Michigan Scientific Corporation (Cage Code 0SVV1) is a small business concern represented by NAICS code 334515.

It is therefore prudent and in the best interest of the Government to publicize a notice of intent to award sole source in accordance with FAR 5.201. The notice will be posted for 14 business days.

The Government will continue to conduct market surveillance on industry capabilities and will make every practicable effort to compete this requirement in any future follow-on actions if a new source for steering effort transducers become available in the future as data requirements evolve.
