

STATEMENT OF WORK TEMPLATE

Introduction/Background:

NASA NESB needs to upgrade the turntable on the Large Volume Computed tomography (LVCT) system in order accommodate heavier parts. This upgrade is in direct support of Mars Sample Return Earth Entry Vehicle heat shield inspection.

Scope of Work:

Contractor will be installing higher capacity turntable compatible with the current LVCT system.

Objectives:

To install higher capacity turntable compatible with the current LVCT system. To support Mars Sample Return Earth Entry Vehicle heat shield inspection.

Description of the Work/Contractor Tasks:

- To install higher capacity turntable compatible with the current LVCT system.
- Travel to NASA LaRC will be required for the contractor to perform the on-site work.
- System will need to be calibrated to ensure proper working function.

Deliverables:

- Installed higher capacity turntable compatible with the current LVCT system.
- Proof of system calibration and working function.

Other Considerations:

Na

Applicable Documents/Background:

Na

Milestones:

- Installation of turn table on LVCT
- Proof of calibration

Government-furnished property:

Contractor will be working on the Large Volume Computed tomography (LVCT) which is located on NASA Langley Research Center in Building 1230 Room 193.
