Subject: ALCO Overhaul Maintenance Course

Fairbanks Morse LLC is the sole OEM for the ALCO engine product for the USCG. We offer an engine maintenance course one week in length and an overhaul class two weeks in length - the only courses authorized by the OEM. The ALCO overhaul class contains roughly 30% classroom and 70% hands on training, the first week of which comprises the maintenance course. The overhaul class consists of disassembly, inspections, and reassembly of the following items: cylinder heads, connecting rods and pistons, camshaft work, main bearings, engine timing, major fuel system component including the injection pumps and injectors as well as setting injection timing. Other components such as pump supports, overspeed trip, governor drive, governor, lube oil pump, and water pumps are also included. Training is currently held in our training facility in Beloit, Wisconsin where our factory is located.

Sincerely,

Eric Emrick
