

**SINGLE SOURCE DETERMINATION USING  
SIMPLIFIED ACQUISITION PROCEDURES (SAP)  
FOR AN ACTION NOT EXCEEDING THE SIMPLIFIED ACQUISITION THRESHOLD  
(AUTHORITY: FAR 13.106-1(b)(1))**

Requisition Number 143021-25-0107 / Requirements-25-2052

**1. Agency and contracting activity.** Department of Commerce, NOAA Acquisition and Grants Office (AGO), National Oceanic and Atmospheric Administration, National Marine Fisheries Service, Northeast Fisheries Science Center, Population and Ecosystems Monitoring and Analysis Division, Ecosystems Surveys Branch.

**2. Description of supplies or services required to meet agency needs (including the estimated value).**

Purchase of a Scanmar Flowsensor HC4-TSS and two additional batteries. The important features of the sensor are that it monitors flow and symmetry of bottom trawl gear through the water in real time which is important to ensure survey standardization. This sensor is deployed on bottom trawl gear during annual spring and fall bottom trawl surveys.

The purchase is for an estimated \_\_\_\_\_ and will need to be delivered by 03/01/2025.

**3. Identification of the limited source(s) to be solicited.**

Network Innovations Maritime/Fusion Marine Technologies  
4237 24th Ave W. Seattle, WA 98199

**4. Authority and supporting rationale.** Only one source or brand name is reasonably available as detailed below:

☐ Other - Only one source is capable -

Scanmar flowsensors are a highly specialized sensor that monitors flow and geometry of bottom trawl nets and communicate with shipboard hydrophones to relay information in real time. Other companies that manufacture net mensuration equipment either do not manufacture a flow sensor or they are not compatible with equipment that our research vessels are equipped with. The ability to monitor flow and geometry of bottom trawl gear in real time is important to ensure survey standardization. If this sensor is not deployed on our gear, we will be missing valuable information for determining whether gear is fishing properly.

## 5. Market Research

Scanmar is a company in Norway that provides net mensuration equipment and sensors. Their website provides a list of worldwide representatives, however, there are no US representatives listed. Fusion Marine Technologies is a company based in Seattle that has worked with ESB in the past to provide Scanmar products for multiple surveys. Other companies that manufacture net mensuration equipment either do not manufacture flow sensors or they are not compatible with our research vessel equipment. This sensor is needed before the spring bottom trawl survey starts in March 2025.

## 6. Technical/Requirements Representative Certification

I certify that this requirement constitutes the Government's minimum needs and the supporting data provided herein is accurate and complete to the best of my knowledge and belief.
