

STATEMENT OF WORK (Sample)

1. Objective/Requirements

The scope of work is to provide the systems necessary hardware to perform engine level development, qualification and acceptance testing of the new Orion Main Engine (OME). The OME will be part of Orion Service Module and will be used on NASA's Artemis VI through IX vehicles.

As part of this effort the obsolete electrical feedthroughs at NASA WSTF Propulsion test offices Test Stand 403 must be upgraded to meet the OME qualification and acceptance testing requirements.

2. Characteristics, Scope, and Specs

Vender shall provide the electrical feedthroughs, listed in Table 1 to update Test Stand 403. To meet propellant compatibility, flight hardware interface, and vacuum requirements the exact parts listed below must be provided. Any deviation must be approved by a technical authority at NASA WSTF Propulsion test office.

Table 1

Part#	Description	QT
DE P/N 59542	1 1/4" VFS DUAL SM OS2 9/125 RIBBON FIBER POTCON MATING CONNECTOR AND FIBER CABLES NOT INCLUDED.	10
DE P/N 58738	1 1/4" VFS DUAL RIBBON FIBER POTCON MATING CONNECTOR AND FIBER CABLES NOT INCLUDED.	10
DE P/N 43950	1 1/4" RBTR POTCON W/ 55#22AWG MATING CONNECTOR AND S/R NOT INCLUDED.	90
DE P/N 56266	1 1/4" RBTR POTCON 26#20AWG MATING CONNECTOR AND S/R NOT INCLUDED.	90
DE P/N 56065	1 1/4" RBTR POTCON 6#22AWG MATING CONNECTOR AND S/R NOT INCLUDED.	30

3. Place of Performance

NASA JSC/WSTF Propulsion Test Office

4. Period of Performance

Testing shall be performed March 1, 2025 through December 1, 2025.
