Request for Information

Solicitation Number: RFI-DIV-07-LABORATORY

Please note, this is not an Order

1. Can you verify the max temp as 150c (300F). Will material rated to 120c (248F) be acceptable?

Max temp of 120c would work as a high temp.

2. How often do you plan on placing orders – monthly, quarterly, or one-time purchase?

Currently, one large order is placed per year. This is subject to change.

3. Please clarify what the following refers to. “Must employ 3 Mil TT plastic with a permanent acrylic adhesive”

This refers to the type of adhesive employed by the label to ensure it does not fall off during the lab process. The material is designed to withstand high/low temperatures and harsh chemicals.

4. Would the customer be open to using a Polypropylene instead of Polyester? The ribbon used with the Polypropylene is R-510.

The customer does not have experience using Polypropylene nor the ribbon R-510. Vendors are welcome to send a sample in response to this RFI.
