

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)? ☐ Yes ☒ No

Contracting Activity: Installation of IDS and ADS security system

Project/Program Name: 26 STS IDS & ADS Install

[REDACTED]

[REDACTED]

Section B: Description of the Supplies/Services Required

26 STS requests the purchase, delivery, and installation of an integrated Intrusion Detection System (IDS) and Access Control System (ACS) for Building 4562 at Cannon AFB. This project is essential to fortify the security posture of the SCIF in Room 222 and the future VPN hub encompassing Room 212 and Corridor 225. By integrating IDS and ACS functionalities, this project will: Ensure compliance with AFMAN 31-101V2 mandates for intrusion detection capabilities, boost the protection of sensitive compartmented information within the SCIF, provide robust access control and monitoring for the future VPN hub, safeguard critical network infrastructure and create a comprehensive security solution that facilitates efficient monitoring and response to potential threats. Installation of IDS/ACS represents a critical investment in the security of building 4562 and its sensitive assets.

Specific Requirements:

Room 222 (SCIF):

- Installation of IDS/ACS server, Lenel controllers, and associated software.
- Installation of a dedicated IDS/ACS enclosure.
- Implementation of access control measures on one (1) door, utilizing one (1) door strike.
- Installation of two (2) 360-degree motion sensors for intrusion detection.
- Integration of existing motion sensor into the IDS.
- Provision and installation of a Line Network Loop Controller Keypad (LNL-CK) for IDS management.
- Comprehensive system testing and documentation for government submission.

Room 212 and Connected Corridor 225, Room 224 & 223 (Future VPN Hub):

- Installation of a dedicated IDS/ACS enclosure.
- Implementation of access control measures on one (1) door for Room 225, utilizing one (1) door strike.
- Installation of four (4) new 360-degree motion sensors for intrusion detection (two (2) in Room 212 and two (2) in Room 223).
- Integration of four (4) existing motion sensors within Corridor 225 into the IDS.
- Provision and installation of a Line Network Loop Controller Keypad (LNL-CK) for IDS management within Corridor 225.
- Comprehensive system testing and documentation for government submission.

Single Source Justification (Simplified Acquisition)

Section C: Justification for Soliciting from a Single Source or Brand Name

LVW Electronics possesses specialized knowledge and proven experience in implementing complex security systems within the Department of Defense (DoD) framework. Their ongoing contract to overhaul the security infrastructure at Cannon AFB demonstrates their deep understanding of DoD security protocols and their ability to deliver large-scale projects successfully. Aligning the Building 4562 project with LVW Electronics leverages their established expertise with the existing base security system. This approach guarantees seamless integration, eliminates compatibility risks, and ensures consistent security protocols across installations. Deviating from this strategy would introduce significant technical challenges, jeopardizing system interoperability and potentially compromising overall security posture. This project is already two years behind schedule, and any further delays would have severe consequences for mission-critical operations at Cannon AFB. Specifically, disruptions to TS (Top Secret) capabilities, including High-Level ASOT (Advanced Special Operations Techniques) training and joint combined exercise debriefs, would severely impact readiness and operational effectiveness.

Section D: Efforts to Obtain Competition

While the unique security demands of the SCIF IDS installation have historically limited the pool of qualified vendors, we recognize the importance of maximizing competition for future procurements of similar systems. Previous attempts to solicit competitive quotation, revealed a significant gap between industry offerings and the stringent security and integration protocols required for this sensitive acquisition. These efforts, though ultimately unsuccessful, provided valuable insight into market capabilities and highlighted the specialized expertise needed to meet the unique demands of DoD security systems.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

We acknowledge the importance of maximizing competition for future security system procurements. However, the unique requirements of the Building 4562 SCIF IDS installation necessitate a tailored approach that prioritizes seamless integration with the existing base-wide IDS infrastructure. Maintaining uniformity and interoperability across all IDS systems is paramount to ensuring robust security posture and efficient system management.

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
