Q&A
RFQ 19SA4025Q0006 Supply & Delivery Load Bank

Q1 Your specs state 50 kW (45kW @380V), 400 VAC, 3 Phase. Are you testing at 400V or 380V or both. The answer matters as the control/cooling power typically comes from the load.

A1 We are testing at 380 volts 60Hz.

Q2 Alternatively, the control power comes from a 120V 1PH 60Hz external source - is that available?

A2 120 volts external source is not available unless we use a transformer. Can you provide a built-in transformer to be supplied within the load bank.

Q3 Do you want local controls (on the load bank) or remote controls?

A3 I need remote controls, and the load step incremental switches will be located near the generator, which will be placed in a separate room.

Q4 Will you be manually testing a power source, or do you need the load bank to automatically provide a varying load to keep a generator within a certain power output (to avoid wet-stacking)?

A4 It will be a manually testing power source we will add load manually through the remote control panel.

Q5 Your RFQ allows overseas vendors to ship the load bank to North Brunswick. But then under section 3, it says we need to be a business in Saudi Arabia and fulfill a number of local functions (such as permits).

A5 Since this will be installed inhouse, supplier should provide technical support (if needed).

Q6 Confirm 400v is going to be used at 50hz, this is normally for international use. 480v, 60hz is standard for US

A6 Electrical supply is 380v 60Hz

Q7 The 4100 is typically stationary but can be moved with forklift or can have casters added for moving. There are many options to be considered: Control Power Transformer, NEMA 4 Type Control Panel Enclosure, Automatic Load Control, Digital Metering with Data Logging, SIGMA 2 Digital Controls, Remote I/O Control, Pilot Relay Control, Arctic Rating (low temperature)

A7 Provide purpose and cutsheet for each option in your quotation, for review.

Note: Our generator supply voltage is 380 v 60 Hz, and the load bank will be connected to a 50kw generator, therefore any capacity above 50kw will not be accepted.
