

STATEMENT OF WORK

Rubrik License/Support Renewal

OVERVIEW:

Joint Region Marianas (JRM) requires the renewal of the license and support for the Rubrik CDM system in order to continue all features and capabilities of the currently installed platform. The Rubrik CDM platform functions as the Joint Region Marianas Platform Enclave's (JRM-PE) Central Log Server which is a critical Information Assurance (IA) Compliance Requirement. Support for the activation of features and capabilities, and training for the end-users to equip them with the knowledge to manage and maintain the system are also included with this package.

IA COMPLIANCE REQUIREMENTS:

NIST SP 800-53 rev4 provides a list of controls that is used for the development of Federal Information Systems, specifically its IA aspect.

SA-4(7): System and Services Acquisition – refers to “National Information Assurance Partnership” (NIAP) approved; Department of Defense Information Systems Approved Products List (DoDIN APL) listed. Hardware and/or Software being procured must be evaluated against NIAP and included in the DoDIN APL.

CP-10: System Recovery and Reconstitution – Provide for the recovery and reconstitution of the system to a known state, after a disruption, compromise, or failure.

The Contractor:

(a) Limits the use of commercially provided information assurance (IA) and IA-enabled information technology products to those products that have been successfully evaluated against a National Information Assurance partnership (NIAP)-approved Protection Profile for a specific technology type, if such a profile exists; and

(b) Requires, if no NIAP-approved Protection Profile exists for a specific technology type but a commercially provided information technology product relies on cryptographic functionality to enforce its security policy, that the cryptographic module is Federal Information Processing Standards (FIPS)-validated.
